directed to statistics@revenue.ie.*

1 Background

The 2006 and 2007 Finance Acts introduced, with effect from 1 January 2007, measures to limit the use of certain tax reliefs and exemptions (known as “specified reliefs”) by high-income individuals who, by means of the cumulative use of various tax incentives, had in previous years the potential to substantially reduce their tax liabilities.

The overall objective is to ensure that, from 2007, individuals with an adjusted income of €500,000 or more (where the full restriction applied) pay an effective rate of Income Tax of approximately 20 per cent on a combination of adjusted income and ring-fenced income.¹ The restriction began to apply where an individual’s adjusted income exceeded €250,000 and the full restriction applied where an individual had adjusted income of €500,000 or more.

The 2010 Finance Act introduced further limitations on the use of specified reliefs, with effect from 1 January 2010. These limitations are designed to ensure that individuals with an adjusted income level of €400,000 or more (where the full restriction applies) pay an effective rate of Income Tax of approximately 30 per cent on a combination of adjusted income and ring-fenced income. In addition, the adjusted income on which the restriction begins to apply was reduced to €125,000.

This report relates to the use of specified reliefs by high-income individuals who are subject to the restriction in the tax year 2016. Other high-income individuals are subject to the normal tax rules. Reports relating to previous years, as well as statistics on the tax paid by all individuals, are available on the Revenue website.²

¹ Adjusted income for a tax year is the sum of an individual’s taxable income before the restriction is applied plus the aggregate amount of specified reliefs used in the year, less ring-fenced income (income which is normally liable to tax at specific rates regardless of the amounts involved or the individual’s marginal rate of tax, e.g., interest from which DIRT is deducted).

² Prior year reports are published at <https://www.revenue.ie/en/corporate/information-about-revenue/research/statistical-reports/high-income-earners-reports.aspx> and Revenue statistics can be found at <http://www.revenue.ie/en/about/statistics/index.html>.

2 Results for 2016

Analysis of the application of the high-income individuals' restriction for the tax year 2016 shows that the objective of achieving an effective rate of Income Tax of approximately 30 per cent for individuals with an adjusted income of €400,000 or more is achieved.

Where adjusted income is less than €400,000, a tapering approach ensured that there is a graduated application of the restriction, with the effective rate of Income Tax increasing towards 30 per cent as adjusted income increases towards €400,000.

A summary of how the restriction operated for the tax year 2016, and the specified tax reliefs covered by the restriction, is included in Annex 1.

A breakdown of the 2016 results showing the effect of the restriction in its tenth year of operation is set out in Annex 2. These results are based on actual returns received. A comparison of the outcome for 2007 through to 2016 is set out below.

Year	Total Number of Individuals	Additional Income Tax €m
2016	521	38.51
2015	625	47.21
2014	779	54.73
2013	904	60.43
2012	1,050	63.21
2011	1,143	63.60
2010	1,544	80.18
2009	452	38.86
2008	423	39.68
2007	439	39.99

The results for 2016 show that the overall number of individuals who are subject to the restriction is 521 and that the additional Income Tax yield is €38.51m. Compared to 2015, this represents a decrease of 104 in the number of individuals and a decrease of €8.7m in the additional yield from the measure.

Cases where Full Restriction applies – Adjusted Income of €400,000 or more

Table 1A (Annex 2) shows that the 149 high-income individuals with an adjusted income of €400,000 or more (i.e., where the full restriction applied) pay an average effective Income Tax rate of 30.1% on the combination of adjusted income and ring-fenced income. These individuals pay on average 40.9% tax inclusive of Universal Social Charge (USC).

This meets the objective set out for the measure. The additional Income Tax involved is €25.8 million, representing a 175% increase on the tax that would otherwise have been

paid if the restriction had not applied. Furthermore, of those 149 individuals, 54 who would not otherwise have paid Income Tax in 2016 are brought into the tax net.

Table 1B (Annex 2) summarises the distribution of the effective tax rates for the 149 cases with adjusted income of €400,000 or more. It shows that the majority of high-income individuals within this category fall into the effective Income Tax rate bands of 30% to 35% (94 cases).

Cases where Restriction partly applies – Adjusted Income of up to €400,000

Table 2A (Annex 2) shows that the 372 high-income individuals with an adjusted income of up to €400,000 (i.e., where the restriction applies on a graduated basis) pay an average effective Income Tax rate of 19.09% on the combination of adjusted income and ring-fenced income. These individuals pay on average 28.61% tax inclusive of USC.

The additional Income Tax involved is €12.7 million representing a 242 per cent increase on the tax that would otherwise have been paid if the restriction had not applied. Furthermore, of those 372 individuals, 164 individuals who would not otherwise have paid Income Tax in 2016 are brought into the tax net.

Table 2B (Annex 2) summarises the distribution of the effective Income Tax rates for the 372 cases with adjusted income of up to €400,000. The spread reflects the graduated nature of the application of the restriction for cases in this category.

Schedule of Declared Use of Reliefs

Table 3 (Annex 2), in relation to each specified relief, shows:

- The overall number of individuals subject to the restriction, who declared that they used the relief; and
- The total combined amount of the relief declared as used by those individuals.

Annex 1

Operation of the Restriction in the tax year 2016

The restriction works by limiting the total amount of “specified reliefs” that a high-income individual can use to reduce his or her tax liability in any one tax year.

In the tax year 2016, the overall objective is to ensure that individuals with an adjusted income of €400,000 or more would pay an effective rate of tax of approximately 30 per cent on a combination of adjusted income and ring-fenced income. A graduated application of the restriction below an adjusted income level of €400,000 would ensure that the effective rate of tax increases towards 30 per cent as adjusted income increased towards €400,000.

For the tax year 2016, the restriction applies to an individual where all of the following criteria applied:

- The adjusted income of the individual for the tax year is equal to or greater than an Income Threshold Amount which is, in general, €125,000 but is less if the individual has ring-fenced income (e.g., deposit interest);
- The aggregate of specified reliefs used by the individual for the tax year is equal to or greater than a Relief Threshold Amount, which is set at €80,000; and
- The aggregate of specified reliefs used by the individual for the tax year is greater than 20% of the individual’s adjusted income.

In the case of married couples and civil partners who are jointly assessed, application of the restriction to each spouse or civil partner is determined separately. Therefore, in 2016, the restriction applies to each individual spouse or civil partner only where the three circumstances above apply to that spouse or civil partner for that tax year.

Specified Reliefs

Broadly speaking, the reliefs that are restricted include:

- The various sectoral and area-based property tax incentives;
- Certain exemptions (e.g., relating to artists’ income and dividends and distributions out of certain exempt income);
- Certain investment incentive reliefs such as Business Expansion Scheme (BES), Relief for investment on significant buildings and gardens and film relief; and
- Relief for interest paid on loans used to acquire an interest in a company or in a partnership.

Normal business-related expenses, deductions for capital allowances on plant and machinery, business-related trading losses and losses from a rental activity that do not arise from the use of specified reliefs are not restricted. In addition, personal tax credits are not affected by the restriction.

Annex 2

Table 1A: Cases with Adjusted Income of €400,000 or more

Range of Adjusted Income	Number of Cases	Income Tax before Restriction	Income Tax after Restriction	Additional Income Tax after application of Restriction	Average Effective Rate before application of Restriction	Average Effective Rate after application of Restriction	Tax including USC payable after Restriction	Average Effective Rate (including USC) after application of Restriction

Note: Certain items are deductible when arriving at adjusted income (e.g., pension contributions, certain rental capital allowances on plant and machinery, trading losses against other income, etc.) that are not deductible against income on which USC is chargeable. These differences can give rise to taxpayers having effective USC inclusive tax rates on their adjusted income in excess of the top rate of tax plus the top rate of USC.
