1. Introduction

1.1 Overview

This document describes the structures of the messages that the traders' automated declarations systems exchange with NCTS. It provides the documentation of the XML structures of the messages, including the XML elements of the messages, their description and additional technical information. The XSDs for these messages are also provided and they can be used for building the source code for the programs that interoperate with NCTS by producing and consuming messages.

1.2 Notations

The document uses two tables to describe each message:

- The summary table outlines the structure of the message. It lists only the high level elements of the message.
- The detailed description table, which includes all the XML elements of the message.

For each XML element the following information is included:

Column name	Description						
LEVEL (L)	The level of the given element in the hierarchy of all the XML elements of the message. One level one, there is only one, the so called “root” element of the XML document. Its name is the same as the identifier of the message						
MESSAGE ENTITY	The description of the message entity. The indentation visually represents the level of the entity in the hierarchy.						
XML TAG	The actual XML tag (element) for this entity.						
REPETITIONS	<p>The repetitions (cardinality) of the element. The notation is explained in the examples below.</p> <table border="1"> <thead> <tr> <th>REP</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>1x</td> <td>One repetition</td> </tr> <tr> <td>2x</td> <td>Two repetition</td> </tr> </tbody> </table>	REP	Description	1x	One repetition	2x	Two repetition
REP	Description						
1x	One repetition						
2x	Two repetition						
OPT	<p>Defines the optionality of the element, as follows:</p> <p>R: For required elements O: For Optional elements D: For elements that either required, optional or that cannot be completed</p>						

TYPE	The type of the element. The notation is explained in the examples below. Note that the type defined in this document is abstract. There can be more restrictions to the acceptable syntax of each element. These are described in details in the respective XSD file.	
	REP	Description
	Complex	This is a complex XML element. It does not include any final information. It includes elements of lower order below it.
	date	Date formatted element.
	a	Alphabetic element. Only letters and no number are allowed.
	n	Numeric element. Only numbers and no letters are allowed.
	an	Alphanumeric element. Both letters and number are allowed.
	an8	Alphanumeric element with exact length of eight (8) characters.
	an1..70	Alphanumeric element with a length between 1 and 70 characters.
	n..16,6	Numeric, decimal element. The maximum permitted total digits are 16. Out of them, a max of six [6] can be decimal digits.
int	Integer number.	
boolean	Boolean values (true, false).	
CODE LIST	Elements with a reference to a code list can take values only from the specified code list. Please refer to the “NCTS-Codelists” document, where the code lists are documented.	
RULES AND CONDITIONS	The values of some elements are validated against rules and conditions. In that case, the codes of the rules and conditions are included in the last column. For the description of the Business Rules, Please refer to the “NCTS-Business-Rules-and-Conditions” document.
