Customs Manual
On Valuation

Document last updated December 2021

This Manual provides a guide to the interpretation of the law governing Valuation for Customs Purposes which is set out in Commission Delegated Regulation (EU) No. 2015/2446 and Commission Implementing Regulation No. 2015/2447 laying down the detailed rules and implementing provisions of Regulation (EU) No 952/2013 of the European Parliament and Council establishing the Union Customs Code, and it should be read in conjunction with these regulations.

1 Introduction

1.1 What is customs valuation?

Customs valuation is used to determine the value of goods when they are being entered into various customs procedures e.g. import, export, warehousing, inward processing. The customs value is essential to determine the correct amount of any customs duty to be paid on imported goods.

1.2 Why is a customs value necessary?

In most cases customs duty is charged as a percentage of the value of the goods being imported – “ad valorem duty”. In order to calculate the amount of duty payable the customs value must first be established.

1.3 Where is the legislation covering customs valuation?

The legislation relating to customs value is set out in Articles 69 to 76 of Regulation (EU) No. 952/2013 (the Union Customs Code), in Articles 127 to 146 of Commission Implementing Regulation (EU) No. 2015/2447 (the Implementing Act) and in Article 71 of Commission Delegated Regulation (EU) No. 2015/2446 (the Delegated Act)). These Articles give effect to the Agreement on the Implementation of Article VII of the General Agreement on Tariffs and Trade (GATT).

1.4 Where are the different duty types set out for goods?

Details of all customs duty types are set out in the Combined Nomenclature (CN) of the European Union (EU). Once the correct CN code has been established for the goods the type of duty applicable to that code can be checked in the CN. Assistance with establishing the correct CN code for goods is available in the Classification Unit, Revenue, Nenagh.
Tel: 01 738 3676.
Email: tarclass@revenue.ie

1.5 Is the customs value used for any other purpose?

In the European Union, the customs value is required:

- **for VAT purposes**
  See Article 85 of Council Directive 2006/112/EC:
  "In respect of the importation of goods, the taxable amount shall be the value for customs purposes, determined in accordance with the EU provisions in force.”
• **for import statistics**
  See Article 4 of the Regulation (EU) N° 113/2010 regarding statistics on external trade:
  “The customs value shall be used...”

• **for some tariff quotas**
  Where a quota applies a valuation limit for the importation of certain goods, as defined in the customs tariff of the European Union (e.g. material X with a total quota volume of XX €).

• **for some rules of origin**
  Where the rule applies valuation criteria (e.g. “manufacture of product X in which the value of non-originating materials does not exceed 40% of the ex-works price”)

1.6 How is the customs value calculated?

There are 6 methods for calculating the customs value of goods. However, the normal method of valuation is method 1 – the transaction value method. The transaction value is defined as the price actually paid or payable to the seller for the goods being imported when they are sold for export to the customs territory of the EU.

Method 1 must be employed before going on to Method 2 and so on. Details of how and when to use the other methods are set out in chapters 2, 3 and 4. The Simplified Procedure Value (SPV) and Standard Import Value (SIV) systems may be used for importations of fresh fruit and vegetables – see [chapter 5](#).

1.7 Is documentary evidence of valuation required?

Customs may request documentation and information regarding any importation and the valuation methods employed – see [appendix A](#).

2 Valuation Methods

2.1 Methods of Valuation

There are six methods of valuation applicable to all goods, namely:

1. The transaction value method;
2. The transaction value of identical goods;
3. The transaction value of similar goods;
4. The deductive method;
5. The computed method; and
6. The residual valuation provision.
The methods listed above must be applied in sequence. However, importers may opt for reversal of the order of application of methods (4) and (5). Importers of certain fruit and vegetables also have the option of using a simplified procedure (SPV) – see chapter 5 for more detail.

2.2 How to Use the Valuation Methods

The most common method of valuation is the transaction value, which uses the invoice price. Wherever possible this is the method to be used.

Only when the transaction value method cannot be used should the other methods be considered. In such cases the customs value is determined by proceeding sequentially through the other methods. It is only when the value cannot be determined under the provisions of an earlier method in the sequence that the provisions of the next method are invoked.

3 Method 1 – Transaction Value Method

3.1 What is the Transaction Value?

The transaction value is defined as the price actually paid or payable to the seller, for the goods being imported, when they are sold for export to the customs territory of the EU, subject to the adjustments detailed in paragraph 3.8.

This is provided that:

(i) There are no restrictions as to the disposal or use of the goods by the buyer other than restrictions which:
   (a) Are imposed or required by law or by the public authorities e.g. an import licence;
   (b) Limit the geographical area in which the goods may be resold; or
   (c) Do not substantially affect the value of the goods;

(ii) The sale or price is not subject to some condition or consideration for which a value cannot be determined with respect to the goods being valued. Where the value of the condition or consideration can be determined it will be regarded as an indirect payment by the buyer to the seller and part of the price actually paid or payable. This applies provided that the condition or consideration does not relate to activities undertaken by the buyer on his/her own account, other than those for which an adjustment is provided in paragraph 3.7.

(iii) No part of the proceeds of any subsequent resale, disposal or use of the goods will accrue directly or indirectly to the seller, unless an adjustment can be made under paragraph 3.7(f); and

(iv) If the buyer and seller are related, (see paragraphs 3.4 and 3.5) the transaction value can still be used so long as the price is not influenced by the relationship between the parties.
The only condition that the buyer must satisfy is that of being a party to the contract of sale. S/he does not have to be resident or established in the EU.

3.2 What is the price paid?

The price actually paid or payable is the total payment made or to be made by the buyer to, or for the benefit of, the seller for the imported goods. It includes all payments made or to be made as a condition of sale of the imported goods by the buyer to the seller. It may also include payments made by the buyer to a third party to satisfy an obligation of the seller. Payment need not necessarily take the form of a transfer of money. Payment may be made by way of letters of credit or negotiable instrument. It may be made directly or indirectly. An example of an indirect payment would be the settlement by the buyer of a debt owed by the seller.

3.3 What if customs query the amount of the customs value declared?

Where reasonable doubts exist regarding the amount submitted as the price actually paid or payable for goods when sold for export to the Customs territory of the EU, customs will notify the importer of the basis for doubting the value and their intention to adjust the value accordingly. Where the proposed adjustment will adversely affect the importer, he or she must be given an opportunity to respond to the customs query and to express their point of view under the “Right to be Heard” provisions (Tax and Duty Manual (TDM) – Right to be Heard) before a final decision is taken.

If customs decide after they have given the importer the right to be heard to adjust upwards the value declared, the final decision must be notified in writing to the importer and stating clearly that the importer may appeal this decision. Details are available at: Customs Appeals.

3.4 Definition of “Related”?

For the purposes of paragraph 3.1(iv) the valuation system regards buyer and seller as related only if:

- they are officers or directors of one another’s businesses;
- they are legally recognised partners in business;
- they are employer and employee;
- any person who directly or indirectly owns, controls or holds 5% or more of the outstanding voting stock or shares of both businesses;
- one of them directly or indirectly controls the other;
- both of them are directly, or indirectly controlled by a third person;
- together they directly or indirectly control a third person; or
- they are members of the same family.
For the purposes of the valuation system, persons, whether natural or legal, may be associated in business with one another, for example one is the sole agent of the other. They will be deemed to be related only if they fall within one of the relationships outlined above.

3.5 “Relationship” Not Necessarily Decisive?

The fact that the buyer and the seller are related within the terms of paragraph 3.4 is not in itself grounds for regarding the transaction value as unacceptable. It is only where the relationship has influenced the price that the transaction value method of valuation may not be used. It is open to the importer to demonstrate that the transaction value was not influenced by the relationship. Where staff have grounds for considering that the relationship influenced the price, they should communicate their grounds to the declarant, in writing if so requested, and s/he should be given a reasonable opportunity to respond - right to be heard provisions.

3.6 Acceptance of the Transaction Value

In a sale between related persons, the transaction value will also be accepted as the value wherever the importer demonstrates that such value closely approximates to one of the following occurring at or about the time of importation:

(i) the transaction value in sales between buyers and sellers who are not related for identical or similar goods for export to the EU; or

(ii) the customs value of identical or similar goods, which has been determined under the deductive method or the computed method.

It should be noted that it is a matter for the importer, not customs, to decide whether to apply these tests. Where the tests are applied, due account must be taken of demonstrated differences in commercial levels, quantity levels and the additions referred to in paragraph 3.7. Account must also be taken of any costs incurred by the seller in sales to non-related buyers, which are not incurred in sales to related buyers.

The tests may only be used for purposes of comparison. They may not be used to establish substitute values.

3.7 What must be added to the price actually paid or payable

The following must be added to the price payable (unless they are already included):

(a) Delivery costs: The cost of transport, insurance loading or handling associated with delivering the goods to the EU border. See chapter 9 regarding additional charges.

(b) Commissions. Certain payments of commission and brokerage, including selling commission – see 9.7 for further details. Buying commission is excluded if it is shown separately from the price paid or payable for the goods.
(c) **Royalties and licence fees** relating to the goods being valued that the buyer must pay, either directly or indirectly, as a condition of sale of the goods being valued. This is done only where they are not already included in the price actually paid or payable. However, royalties and licence fees should not be added to the price actually paid or payable when they represent charges for the right to reproduce the imported goods in the EU; or payments made by the buyer for the right to distribute or resell the imported goods if such payments are not a condition of the sale for export to the EU of the goods.

(d) **Containers and Packing.** The following, to the extent that they are incurred by the buyer and not included in the price actually paid or payable;

(i) the cost of containers, which are treated as being one, for customs purposes, with the goods in question. These would include, inter alia, camera cases, musical instrument cases, or other cases specially shaped or fitted to contain a specific article or set of articles. They should be suitable for long-term use and presented with the articles for which they are intended. Where containers are the subject of repeated importations, their cost should, at the request of the importer, be apportioned as appropriate;

(ii) the cost of packing, comprising the cost both of labour and materials.

The containers referred to at (d)(i) above are those in which the goods are contained at the time of importation and in which the goods will be sold in the normal course of trade. The cost of such containers should be included in the customs valuation. The value of any containers, which are satisfactorily shown to be returnable, may be excluded. However, any charges payable by the importer in respect of their use or their return to the senders must be included. Where the container itself is liable to customs charges, the customs value of the container is to be determined in accordance with the normal valuation provisions. In the case of transport devices such as transport containers, the cost of the use of the container is included in the customs value as part of the transport costs.

The packing referred to at (d)(ii) above means any external or internal containers, holders, wrappings or supports other than transport devices (e.g. transport containers), tarpaulins, tackle or ancillary transport equipment. The cost of any such packing and packing materials should be included in the value for customs purposes.

(e) **Assists:** Items sometimes known as assists may be supplied, directly or indirectly and free or at a reduced cost, by the buyer for use in the production and sale of the goods. It is necessary to establish that the value of such assists has not been included in the price actually paid or payable. In such circumstances, the value of the following, apportioned as appropriate, is to be included:
a) materials, components, parts and similar items incorporated in the imported goods;
b) tools, dies, moulds and similar items used in the production of imported goods;
c) materials consumed in the production of the imported goods; and
d) engineering, development, artwork, design work, and plans and sketches (other than research and preliminary design sketches) carried out elsewhere than in the Union and necessary for the production of the imported goods.

Circumstances arise where the tools, dies and moulds referred to at b) above are required for use in the production of imported goods. The cost of making these tools etc. may be included in the value of the imported goods for customs purposes. This is done when such costs have not been included in the price paid or payable. This is the position irrespective of the fact that the actual pattern, mould, etc., may be invoiced separately and may not be imported with the manufactured articles or goods or at all.

The apportionment of such charges should be made in a reasonable manner appropriate to the circumstances. Various possibilities exist. The value could, for example, be apportioned:

- to the first shipment, if the importer wishes to pay duty on the entire value at one time; or
- over the number of units produced up to the time of the first shipment; or
- over the entire anticipated production where contracts or firm commitments exist for that production.

The method of apportionment used will depend upon the documentation provided by the importer.

(f) Proceeds of resale. The value of any part of the proceeds of any subsequent resale, disposal or use of the imported goods that accrues, directly or indirectly to the seller;

3.8 Are there any deductions allowable from the customs value?

Where the value is based on the invoice price, certain deductions are normally allowable provided the deductions are clearly distinguished in the documents produced.

Discounts. These can only be left out where they relate to the imported goods being valued and there is a valid contractual entitlement to the discount at the material time for valuation. Discounts (such as contingency or retroactive discounts) related to previous importations cannot be claimed in full on the current importation.

(i) Quantity or trade discounts. The trader can leave out these discounts where earned. In other words, the price paid or payable net of these discounts is acceptable. If the trader is related to the seller the discounts will also be allowed if that relationship has not affected the price of the goods.
(ii) Cash and early settlement discounts. The trader can also leave out these discounts on the following basis:

a) when the payment reflecting the discount has been made at the time of entry to free circulation
b) if the payment has not been made at the time of entry to free circulation, it will be allowed at the level declared provided it is a discount generally accepted within the trade sector concerned
c) if the discount is higher than is generally accepted within the trade sector concerned it will only be accepted if you can demonstrate, where required, that the goods are actually sold at the price declared as the price actually paid or payable and the discount is still available at the time of entry to free circulation.

Care should be exercised where discounts other than these are shown on the invoice. Instances may occur where the term “discount” is used in a special sense or in respect of special considerations, e.g., compensation for defects in fulfilling earlier orders. In such cases and in all cases where a discount of a non-straightforward nature is claimed, the rationale underlying the discount should be examined.

**Delivery costs within the EC.** If the sellers or carriers charge covers delivery beyond the EU border the additional charges may be deducted for such delivery, provided they are shown separately from the price paid or payable for the goods – see paragraph 9.7 for further details.

**EC Duties or Taxes:** Customs duty or other taxes may be deducted from the price paid to calculate the customs value if they are included.

**Dividends:** Dividend payments made to the seller may be deducted.

**Marketing activities related to the imported goods.** Importers may deduct the cost of the following activities, which they carry out at their own expense:

- advertising
- promotion, or
- guarantee of warranty services

In addition, any payments that are made towards general marketing support which are not related to imported goods should not be included. Note: The cost of marketing activities borne by the seller is to be included in the customs value even if they are charged separately from the invoice price for the goods.

**Export Quota and Licence Payments.** Payments for export quota and licence payments may be excluded from the customs value but payments for certificates of authenticity for meat must be included.
**Interest charges.** These may be left out if they if they are payable under a financing arrangement for buying the imported goods, providing the charges are shown separately from the price paid or payable for the goods.

**Rights of reproduction.** Payments for these rights may be left out if they are shown separately from the price paid or payable for the goods.

**Post importation work.** Charges for the following may be excluded:
- construction work
- erecting
- assembling
- maintaining or giving technical help for goods such as industrial plant, machinery or heavy equipment. The work may be carried out before or after importation so long as it is carried out as part of the installation of the imported goods and the charge must be shown separately from the price paid or payable for the goods.

**Management fees.** Management fees paid to the seller may be excluded. This would include general service fees for administration, marketing, accounting etc. that are not related to the imported goods.

### 3.9 Customs Clearance Charges

Customs clearance charges, whether included in the invoice price or otherwise charged to the importer, are included in the value for duty to the extent only to which they relate to pre-importation expenses.

### 3.10 Time Tolerance

There is no time limit on the period within which the price paid or payable can be accepted as the customs value. Accordingly, the price actually paid or payable may be accepted as the basis for customs value irrespective of the date of contract.

### 4 Other Methods of Valuation

#### 4.1 Consideration of the Other Valuation Methods

Most importations will fall to be valued under the transaction value method. However, where for example consignments are imported on other terms and there is no price actually paid or payable then the transaction value cannot be used. Recourse then must be had to the next sequential method of valuation, the “identical goods” method.
4.2 Method 2 – Identical Goods Method

This method is defined as the transaction value of identical goods sold for export to the EU and exported at or about the same time as the goods being valued.

In establishing the customs value under the identical goods method, a sale at the same commercial level and in substantially the same quantity should be used to establish the customs value.

Where no such sale exists, a sale at a different commercial level and/or in different quantities may be used. Appropriate adjustments must be made to take account of these differences. This can only be done where evidence is made available to show clearly the reasonableness and accuracy of such adjustments. Adjustments will also be permitted to take account of significant differences in transport, handling and insurance charges arising from differences in distances and modes of transport.

In establishing the customs value under the identical goods method, precedence should be given to a transaction value for goods produced by the same person. If no such comparison is possible, then a transaction value for goods produced by a different person may be used. If more than one transaction value of identical goods is found, the lowest value should be taken to determine the customs value of the imported goods.

Only those customs values of identical goods determined under the transaction value method can be used in establishing the customs value under the identical goods method. A customs value established, for example, under the deductive method cannot be used.

4.3 Method 3 – Similar Goods Method

This method is defined as the transaction value of similar goods sold for export to the EU and exported at or about the same time as the goods being valued. The provisions of paragraph 4.2 also apply to this valuation method. The difference here is that similar rather than identical goods are used.

Similar goods will differ in some respects from the goods being valued. They should carry out the same tasks, be produced in the same country and be commercially interchangeable with the goods being valued.

4.4 Method 4 – Deductive Method

Using the deductive method, the customs value is calculated on the basis of the unit price at which the goods are sold in the EU. The unit price used can be for the imported goods or identical or similar imported goods. They must be sold in the condition as imported and in the greatest aggregate quantity. The buyer and seller cannot be related.

The price is subject to the following deductions:
(i) **either** the commissions usually paid or agreed to be paid **or** the additions usually made for profit and general expenses in connection with sales in the EU of imported goods of the same class or kind. These include the direct and indirect costs of marketing the goods in question;

(ii) the usual costs of transport and insurance and associated costs incurred within the EU; and

(iii) the customs duties and other taxes payable in the EU by reason of the importation or sale of the goods.

The unit price is defined as the price at which the greatest number of units is sold at the first commercial level after importation at which such sales take place.

Sales at or about the time of importation of the goods being valued should normally be used under this method. Where, however, such sales do not occur, sales at the earliest date thereafter should be used. This is provided such sales take place within 90 days from the date of importation. The “earliest date thereafter” is defined as the date by which sales of the imported goods or of identical or similar imported goods are made in a sufficient quantity to establish the unit price.

Provision also exists whereby the importer may request that a sale of the imported goods after further processing may be used. This would arise when the imported goods, identical or similar imported goods are not sold in the EU in the condition as imported. Due allowance must be made for the value added by such processing and the deductions provided for above.

The deductive method can only be used provided, insofar as the post-importation sale is concerned, that:

- the buyer and seller are not related; and
- the buyer has not supplied, either directly or indirectly, free or at reduced cost, any of the elements, such as assists, for use in connection with the production and sale for export of the imported goods.

Staff should be aware that importers have the option of proceeding to the computed method of valuation before using the deductive method, if they so wish.

### 4.5 Method 5 – Computed Method

The computed method is used where the seller is the actual producer of the goods and has access to all information relating to the production of the imported goods. The customs value is determined by calculating the sum of the following elements:

i. the cost or value of materials and fabrication or other processing employed in producing the imported goods;

ii. an amount for profit and general expenses. The direct and indirect costs of producing and selling the goods for export which are not included under (i) above would constitute
such an expense. This amount should equal that usually reflected in sales of goods of the same class or kind as the goods being valued which are made by producers in the country of exportation for export to the EU; and

iii. the cost of transport and insurance of the imported goods.

The cost or value referred to in indent (i) includes the cost of containers and packing. It also includes the value, apportioned as appropriate, of the items listed in paragraph 3.7(e) (i.e. assists) provided they were used in the production of the goods. The value of design work, etc., is allowable only to the extent that it is charged to the producer.

4.6 Method 6 – Residual Valuation Provision

In exceptional circumstances it may not be possible to determine the customs value of imported goods under any of the foregoing valuation methods. In such an event, the value may be determined by applying, in a flexible manner, whichever of those methods most readily enables calculation of the customs value.

In applying this residual method, if more than one of the usual methods can be applied flexibly, the normal sequence for such methods should be taken into account. The customs value arrived at should be fair, reasonable, uniform and neutral and should reflect commercial reality to the extent possible.

However, under the residual method, the customs value must not be based on:

(i) the selling price in the EU of goods produced in the EU;
(ii) a system which provides for the acceptance of the higher of two alternative values;
(iii) the price of goods on the domestic market of the country of exportation;
(iv) the cost of production, other than computed values determined for identical/similar goods;
(v) prices for export to a country not forming part of the customs territory of the EU;
(vi) minimum customs value; or
(vii) arbitrary or fictitious values.

Given the number, variety, and sequential application of the specific valuation methods available, it is anticipated that this residual provision, which is added in the interest of comprehensiveness, will rarely be invoked.
5  Simplified Procedure System (SPV) for the Customs Valuation of Certain Fruit and Vegetables

5.1  What are SPVs?

The customs values of certain fruit and vegetables may be determined in accordance with a simplified procedure system known as the SPV, the basis for which is laid down in the Union Customs Code and Article 142 of the Implementing Act. The European Commission will make available, and the importer may use, a unit price as a basis for the determination of the customs value of whole fruit and vegetables, of a single kind, imported on consignment only. Determination of the value of the unit price is dependent on, inter alia, the sales prices for the products in the major marketing centres throughout the Union.

Goods imported on consignment denotes that the goods are dispatched to the country of importation not as a result of a sale, but with the intention that they would be sold for the account of the supplier, at the best price obtainable. At the time of import, no sale has taken place, therefore no transaction value should be available to the customs authority at point of entry. If such a transaction value is available then the goods are not classed as imported under consignment and are therefore not eligible to use the SPV system, an alternative method of valuation must be used.

Excluded from the SPV are fruit and vegetable products that have undergone a cut and dicing process prior to importation.

5.2  What fruit and vegetables are covered by SPV?

The list of fruit and vegetables covered by SPV is given at Appendix B

5.3  Notification of current SPVs to the regions and agents

The customs values are notified to the regions and a list of interested customs clearance agents by Valuation Section, Nenagh on a fortnightly basis. The values apply for periods of fourteen days commencing on Friday and ending the following Thursday week (both days inclusive).

5.4  Should declared weights of goods covered by SPVs be checked?

A check on declared weights should be carried out regularly by staff engaged on examination duties. Generally, the actual net weight of the produce is relevant for the purpose of establishing the customs value of the consignment.
However, a reasonable tolerance may be allowed where circumstances so justify. This would arise where an importer has factored in extra weight to allow for shrinkage in transit or additional weight per retail package to ensure compliance with minimum weight legislation.

5.5 Damaged Goods or Goods Unfit for Human Consumption

Where a consignment contains 5% or more of produce unfit for human consumption the goods should be treated as damaged. Also, where the value of the consignment has depreciated by at least 20% in relation to the average market price for sound produce the goods should be treated as damaged.

In such circumstances the value established under the SPV should be applied to the sound portion of the goods. The remainder must be destroyed under customs supervision. Alternatively, the value established under the SPV should be reduced by an appropriate percentage, such percentage reduction being attested by an independent expert. The onus is on the importer to invoke these special arrangements where he or she considers that they apply.

5.6 Notification of significant price variations.

The European Commission is anxious to ensure that customs values established under the SPV reasonably reflect the customs values that would apply if any of the other methods of valuation were used. Certain variations in values might be anticipated, for example, because goods are not imported all year round.

Some variation will inevitably arise as a result of the operation of the system but where substantial differences come to notice Valuation section, should be advised accordingly. Under no circumstances, however, should clearance of the goods be delayed.

6 Valuing free of charge goods

Method 1 cannot normally be used because there is no price paid or payable unless the goods have been the subject of an earlier sale. Methods 2 and 3 may be used and then sequentially through the other methods.
6.1 Valuing free of charge replacement goods.

If the supplier includes in the shipment a quantity of items “free of charge” as replacements for goods likely to be defective or damaged in transit, the contracted sale price can be regarded as covering the total quantity of items shipped.

7 Valuing rented or leased goods

The alternative methods of valuation to the transaction value method are to be applied to goods imported under a rental agreement as there is no sale involved. When goods are imported under a sale or lease agreement, there is no sale between the supplier and the importer. However, prior to being rented or leased, the goods may have been the subject of a sale. In this circumstance it may be possible to use Method 1. Otherwise Methods 2 to 5 should be tried.

However, in most cases, Method 6 will be appropriate. Further information on how to calculate values for this scenario may be requested from Valuation Section.

8 Goods lost, damaged or defective

- No duty is payable on any goods that are short shipped or lost in transit before release into free circulation.
- If damage occurred before the goods are released into free circulation the customs value may be amended.

8.1 Evidence of loss, damage or defective goods.

Examples of evidence that may be accepted are as follows:
- a credit note, from the seller;
- a statement from the customs office that examined the goods;
- a certificate of condemnation;
- a statement from an independent expert such as a surveyor; or
- details of settlement of claim against insurer or carrier.

The above is not an exhaustive list.

8.2 How is the revised customs value calculated?

The revised customs value may be calculated by:
- apportioning the original price paid or payable to take account of partial loss or damage;
- using the revised price paid or payable where the seller reduces the price as a result of the loss or damage; or
• comparing the price at which the damaged goods are sold with the published average market values for the same type of goods at the time of sale and using the ratio to apportion the invoice price.

8.3 What if the goods are found to be defective after importation?
If the defects are repaired and the seller reimburses the importer under warranty for the cost of the warranty work carried out a claim for a partial refund of duty may be considered. Full details of the contractual arrangements covering the warranty work should be provided along with evidence of:

• the discovery and nature of the defect (including sufficient details to identify the goods concerned);
• the repair work undertaken and the cost;
• the reimbursement of the repair cost by the seller in accordance with the terms of the warranty.

9 Additional Charges

9.1 Transport Charges
The cost of transporting the goods to the place of introduction (see paragraph 10) may already be included in the customs value. In circumstances where the transport is free or provided by the buyer to the place of introduction, a calculated transport cost is to be included in the customs value. In cases where the actual freight charge is known at the time of preparing the customs declaration, such charge should be used when calculating the value of the consignment for customs purposes. The transport cost incurred after the arrival into the customs territory of the EU shall not be included in the customs value, provided that such cost is distinguished from the total charge, i.e., the split is provided.

In cases where the actual freight charge is not known at the time of customs clearance, the equivalent of that charge will apply (as ascertained from the tariff of the carrier in question for the same journey or reverse journey and for the same type of consignment).

9.2 Air freight charges
Where goods are transported by air on the same means of transport to a point beyond the place of introduction, transport costs are to be assessed in proportion to the distance covered outside and inside the customs territory of the EU. Air transport costs to be included in the customs value
are set periodically by Commission Regulation. These are available in Annex 23-01 – see appendix C –of Implementing Regulation EU 2015/2447.

Express Mail Services (EMS) fall into the category of “goods transported by air”.

9.3 Postal charges

In the case of goods imported by post, all postal charges levied up to the place of destination, with the exception of postal charges levied in the country of importation, are to be included in the customs value. In determining the customs value of non-commercial consignments imported by post no deduction is to be made for postal charges.

9.4 Insurance charges.

The cost of all insurance effected in relation to the transport and handling of the goods must always be included in the value for customs purposes. In the case of floating policies, where the value of each consignment is written off as it arrives against the total amount insured, a proportionate amount of the premium should be included in such value. See example below of how this apportionment works:

**Annual set premium – €3500.00**

Total value of imports in the previous 12 months – €1,750,000.00

The premium can be expressed as a percentage of the total value of imports.

\[
3,500/1,750,000 \times 100 = 0.20\%
\]

This percentage can be used to calculate the insurance costs for individual imports made during the following 12 months.

Where the total value of imports includes, for example, insured or non-insured goods or both dutiable and non-dutiable imports, the percentage can be adjusted if the relevant information is available. Costs of insurance to cover risks, other than risks in transport to the port or place of introduction, should not be included.

**Annual Set Premium €1000.00 or less**

If the total amount of the annual premium is less than €1000 the total amount of the premium should be included on the first declaration after each annual renewal date.

9.5 Loading and Handling Charges

All charges, including such charges as foreign port dues, loading charges and demurrage charges at foreign ports, in respect of bringing the goods to the place of introduction, may be included in the customs value. (Demurrage is an extra charge paid as compensation for delaying a ship caused by the person chartering it failing to load it before the time of scheduled departure).
If the cost of unloading at the place of introduction can be distinguished on the relevant documentation it does not form part of the customs value and may be omitted.

Any weighing costs borne by the importer at destination, not forming part of the price paid or payable for the goods, are not to be included.

Expenses incurred in connection with the handling or delivery of goods after their arrival at the place of introduction, such as port dues or landing charges, are not to be included.

9.6 Duties and Taxes Applicable outside the EU

Where the imported goods are subject to duties and EU taxes applicable outside the EU such duties and taxes are to be included in the customs value. The cost of these duties and taxes will normally be borne by the seller and therefore form part of the price paid or payable for the goods.

Any claim for a reduction in the customs value on the basis that the goods have been or will be relieved from such duty/taxes can be allowed. This can be done where satisfactory evidence is presented that the benefit of such relief will be passed on to the buyer.

9.7 Charges that can be excluded

In cases where either the transaction value, transaction value of identical goods or the transaction value of similar goods method is being used, certain expenses are not to be included. The following expenses should not be included provided they are distinguished from the price actually paid:

i. charges for construction, erection, assembly, maintenance or technical assistance, undertaken after importation of imported goods such as industrial plant, machinery or equipment;

ii. customs duties and other taxes payable in the EU by reason of the importation or sale of the goods;

iii. a charge for the right to reproduce the imported goods in the EU;

iv. buying commissions (fees paid by an importer to an agent for the service of representing him/her in the purchase of the goods being imported);

v. transport charges after importation into the customs territory of the Union, provided those charges are separately invoiced and considered to be for an internal movement;

vi. charges for interest under a financing arrangement, entered into by the buyer and relating to the purchase of imported goods provided that:
   (a) the financing arrangement has been made in writing; and
   (b) where required, the buyer can demonstrate that such goods are actually sold at the price declared as the price actually paid or payable; and
d) (c) the claimed rate of interest does not exceed the level for such transactions prevailing in the country where, and at the time when, the finance was provided.

10 Place of Introduction

10.1 Standard Place of Introduction

For the purposes of establishing the transport, handling and insurance charges to be included in the customs value, the place of introduction into the European Union is defined, inter alia, as follows:

10.1.1 Sea

- If the goods are delivered direct to an Irish Port the place of introduction is the port of importation into the Republic of Ireland.
- If the goods are delivered to another Member State before being sent to Ireland the place of introduction is the port of unloading in that Member State.
- If the goods are transhipped within the EU the place of introduction is the port of transhipment, subject to transhipment being certified by the customs authorities of that port.

10.1.2 Air

- The place of introduction is the point where the EU border is first crossed during the air journey.

10.1.3 Road Rail or Inland Waterway

- The place of introduction is the point where the goods first cross the land frontier of the customs territory of the EU.

10.1.4 Post

- The place of introduction is the address for delivery.

10.2 Special Rules Relating to the Place of Introduction

Special rules have been drawn up to cover goods which enter the customs territory of the EU and are then carried to a destination in another part of that territory through the territory of a third country or by sea viz:

(i) goods may be introduced into the customs territory of the EU and then carried to a destination in another part of that territory through the territories of Belarus, Russia, Switzerland, Bosnia and Herzegovina, Montenegro, Serbia, Kosovo or the former Yugoslav Republic of Macedonia. In these circumstances, the customs value should be determined by reference to the first place of introduction into the customs
territory of the EU. This can be done provided the goods are carried direct through the territories of those countries by a usual route across that territory to the place of destination. These provisions also apply where the goods have been unloaded, transhipped or temporarily immobilized in the territory for reasons relating solely to their transport.

(ii) goods may be introduced into the customs territory of the EU and then carried by sea to a destination in another part of that territory. In these circumstances, the customs value should be determined by reference to the first place of introduction into the customs territory of the EU.

Where neither (i) nor (ii) applies, the customs value is determined by reference to the next place of introduction which meets the criteria at 10.1 above.

11 Application of the valuation rules in specific cases

Most consignments will fall to be valued in accordance with the transaction value method. In the following paragraphs, the valuation rules are set out for some specific situations and circumstances.

11.1 Combined Purchasing

Combined purchasing occurs where a large consignment of goods is purchased in a single transaction. If a quantity of that consignment is then declared for free circulation into the EU, the value for that quantity will be determined by the ratio to the proportion of the total price and quantity purchased.

11.2 Private Importations

In the case of goods imported for the private use of the importer and not for sale, whether imported in accompanied baggage or otherwise, the customs value is established using the normal customs valuation methods.

11.3 Hire Purchase

When goods are sold on certain hire purchase contracts, ownership of the goods passes automatically to the hirer once all the payments specified in the contract have been met. This should be treated as a contract of sale. Where the interest payable can be distinguished, this is to be excluded.

Certain hire or leasing contracts include an option to purchase the goods. When such an option is exercised before the material time for customs purposes the price actually paid or payable under the option may be used to determine the customs value.
Otherwise, the customs value is to be determined by proceeding sequentially through the alternative valuation methods.

11.4 Second-Hand or Used Articles
Where second-hand or used articles are the subject of a sale, and the conditions for transaction value are satisfied, that method of valuation is to be applied whether the goods are imported as merchandise or for private use.

In circumstances where no sale price exists, the transaction valuation method cannot be used. Also, where the article is imported by a person in whose possession and use it has been for an appreciable period prior to importation, the transaction valuation method cannot be used. The value is to be determined by proceeding sequentially through the alternative valuation methods. If you use Method 6. The customs value can be based on the value of the goods when acquired less an amount for loss of value due to the usage.

11.5 Successive Sales
This applies where goods have been the subject of a series of sales prior to importation. In such cases, the last sale occurring in the commercial chain prior to the introduction of the goods into the customs territory of the EU is to be considered the sales price for customs valuation purposes.

The transaction value of the goods is determined at the time of acceptance of the customs declaration based on the sale occurring immediately before the goods were brought into the customs territory.

11.6 Goods Imported for Sale on Consignment
Certain goods liable to ad valorem duties may be imported for sale on consignment. These goods are exported to the EU for sale at the best price obtainable for the consignor in the country of exportation. The normal valuation rules apply in that in the absence of a price paid or payable the customs value must be established by proceeding sequentially through the alternative valuation methods.

11.7 Goods Imported for Sale by Auction
In the case of paintings and other articles imported for sale by auction, the normal valuation rules apply. It is necessary, in the absence of a price paid or payable, that the customs value be established by proceeding sequentially through the alternative valuation methods.

12 Time for valuation purposes
The material time for valuation for customs purposes is:
(i) for goods declared for entry into free circulation, the date of acceptance by the customs authorities of the declarant’s statement of his/her intention that the goods should enter into free circulation. This is to be taken as the date on which entry for free circulation is accepted;

(ii) for goods which enter free circulation after another customs procedure, for example inward processing, the time will be as laid down in the instructions for the appropriate customs procedure.

In the case of the transaction value method, if the price has not actually been paid at the material time for valuation, the price payable for settlement may be taken as the basis for customs value.

13 Invoices and payments in foreign currencies
Where factors used to determine the value of goods for customs purposes are expressed in a currency other than the Euro, the rate of exchange to be used is the periodic rate established in accordance with paragraph 13.1. This rate of exchange is applicable even where payment for the goods has been made prior to importation at a different rate of exchange.

It should be noted that EU legislation provides that the rate of exchange to be applied is that in force at the material time for valuation for customs purposes.

The procedures to be followed where payment is to be based on a fixed rate of exchange agreed by contract in advance are set out in paragraph 13.4.

13.1 Establishing the rate of exchange
The rates of exchange quoted by the Central Bank on the second last Wednesday of each month are used for customs valuation purposes for the following calendar month.

13.2 Publication of rates of exchange
Details of the rates to be applied in a calendar month are posted on the Revenue website and are also notified by Valuation Section to the Regions and LCD.

13.3 Payment made at fixed rate of exchange
An invoice may be made out in Euro but indicates that payment is to be made in foreign currency at a fixed rate of exchange with a specific declaration to that effect being made on the entry. In these circumstances, staff, if satisfied as to the bona fides of the transaction, will calculate the value. This will be done by converting the Euro into foreign currency at the fixed rate of exchange and re-converting the resulting figure into Euro currency using the rate ruling at the date of declaration indicated in paragraph 13.1.

When an invoice is made out in foreign currency converted into Euro at a fixed rate of exchange agreed by contract in advance, the price is to be considered as being invoiced in national currency.
Provided staff are satisfied that payment is to be made accordingly, the value is to be calculated on the conversion basis invoiced. However, if such value is lower than that calculated at the ruling rate of exchange, a specific declaration on the entry as to the basis of settlement is required.

In the case of any doubt or ambiguity regarding the terms of settlement, a written explanation as to the precise method and basis of settlement should be sought from the trader.

14 Valuation rules for specific customs procedures
Specific provisions exist relating to certain customs procedures where goods are released for free circulation after being assigned a different treatment or use, for example Inward Processing. The staff manual on the different customs-approved treatment or use should be consulted where appropriate.

Where goods are sold for export to the customs territory of the Union, not before they were brought into that customs territory, but while under a warehouse procedure in the Union, the transaction value will be based on that sale.

If a proper sale for export exists when the goods arrive into the EU, then that is the basis for the customs value (Article 128(1) IA). Alternatively, when no such sale exists, the sale (deemed to be a “sale for export”) taking place during the warehouse procedure will be the relevant basis for the declarant to use as a basis to declare a customs value under the transaction value method. In such situations, where the goods are the subject of a sale and fulfil the conditions laid down in Article 70 UCC (and the sale is not a “domestic” one) only after being placed under a warehouse procedure, such sale shall be used for the determination of the customs value under the transaction value method.

The costs of warehousing and of preserving goods while they remain in the warehouse should not be included in the customs value if they are shown separately from the price actually paid or payable for the goods.

15 Release of goods in advance of final determination on value
Where doubts exist as to the accuracy of declared valuation particulars, the release of goods should only be refused or unduly delayed in the most exceptional circumstances (e.g. suspicion of fraudulent activity).

In normal circumstances, goods should be released on provision of a suitable deposit or security. In this context, it is paramount that the level of security or deposit taken should be sufficient to cover the potential duty at risk.
16 AIS Data Element 4/13 (Valuation indicators)

Since the introduction of the AIS (Automated Import System), completion of DE 4/13 replaces the requirement to provide a paper version of DV1(G563).

AIS Data Element (DE) 4/13 highlights any possible influences on the invoice price using indicators 1 or 0:
- is the buyer related to the seller? (1=yes, 0=no)
- are there any restrictions as to disposal of the goods? (1=yes, 0=no)
- is the sale subject to some condition that cannot be valued? (1=yes, 0=no)
- do some proceeds of a subsequent resale go to the seller? (1=yes, 0=no)

DE 4/13 is not always mandatory.
Business Rule 0414 sets out that, “if the Customs value of all items on the declaration, DE '4/14 Item price/amount' plus or minus DE '4/9 Additions and deductions' (where applicable, otherwise DE 4/9 is considered as Zero) is over €20,000 AND D/E '2/3 Documents type' does not contain ‘1D03’ or ‘1D05’ or ‘Y945’ THEN DE ‘4/13 Valuation indicators’ is mandatory ELSE DE ‘4/13 Valuation indicators’ is optional”.

Except where it is essential for the correct determination of the customs value, the Member State of acceptance of the declaration shall waive the obligation to provide this information,
— where the customs value of the imported goods in a consignment does not exceed EUR 20 000 provided they do not constitute split or multiple consignments from the same consignor to the same consignee, or
— where the importation is of a non-commercial nature or
— in case of continuing traffic in goods supplied by the same seller to the same buyer under the same commercial conditions.

Also, Member States may waive this information where the customs value of the goods in question cannot be determined under the provisions of Article 70 of the Union Customs Code. In such cases the declarant shall furnish or cause to be furnished to the customs authorities such other information as may be requested for the purposes of determining the customs value.

General Declaration (C&E G563A)
Provision exists, in the case of continuing traffic in goods supplied by the same seller to the same buyer, under the same commercial conditions, for the acceptance of a general declaration on form C&E G563A in lieu of DE 4/13 for each consignment. The completed C&E G563A form is submitted to the customs office responsible for the trader.

The customs office must check the form carefully before deciding if authorisation for use of the general declaration should issue to the trader. The officer responsible for processing the application must:
• ensure all questions are answered and the form is properly completed and signed;
• assess the implications of the information supplied;
• be satisfied that the sellers listed on the application form are regular exporters to that trader;
• check the compliance record of the trader on ITS.

The following material is either exempt from or not required to be published under the Freedom of Information Act 2014.

[…]

The general declaration will remain in force for 3 years. It must be renewed at the end of that period. On the written request of the declarant, a seller’s name may at any time be deleted from the schedule. If a trader wishes to add a new seller to the authorisation during the validity period of the authorisation, they should contact their Revenue district to establish if a new application is required. The trader should be advised to keep a record of the date on which the authorisation expires. It is in the trader’s interest to make sure that a renewal application is made in good time. If the authorisation is allowed expire, the number is no longer valid, and DE 4/13 must be completed for each individual import entry. Traders may not continue to use an out of date G563A authorisation number. Where, during the period of validity of the declaration, any doubt arises as to whether an importation comes within the terms of the declaration, a DE 4/13 entry should be requested from the trader. Copies of the G563A forms are available online at Customs Valuation - Related Forms.

Persons competent to make G563A declarations
A G563A valuation declaration may be made:
• by the actual importer, if an individual;
• in the case of a firm, by one of the partners;
• in the case of a company, by a director or by the secretary;
• by an employee duly authorised in writing by one of the afore mentioned persons;
• by a customs clearance agent, forwarding agent, or any other person duly authorised in writing for that purpose by one of the persons mentioned above.

It should be noted that the person making the valuation declaration must be a resident of, or have his or her place of business in, the customs territory of the EU and she or he must be in possession of the relevant facts. The declarant, by completing a declaration, assumes responsibility for:
• the accuracy and completeness of the particulars given in the declaration;
• the authenticity of the documents produced in support of these particulars; and
• the supply of any additional information or document necessary to establish the customs value of the goods.

17 Importance of Valuation
In view of the importance of valuation to the correct assessment and application of what is essentially an ad valorem customs tariff, auditors and other staff concerned should pay special attention to the requirement for importers to declare the full and correct value of all products. This valuation should be based on the open-market or acceptable transaction value basis including additional charges (as set out in paragraph 6).
18 Valuation Orders

18.1 What is a Valuation Order?

A valuation order is a formal determination of the value to be declared on customs declarations in certain cases. Article 140 of the UCC IA states that the customs authorities need not determine the customs valuation of imported goods on the basis of the transaction value if they are not satisfied on the basis of reasonable doubt that the declared value represents the total amount paid or payable as referred to in Article 70(1) of the UCC.

In certain cases (e.g. because buyer and seller are related, and this has influenced the price paid) the customs value cannot be established solely on the basis of the price paid. An alternative way of determining the correct customs value must be established.

Valuation orders lay down the valuation methods by which customs values should be determined in relevant cases. In many instances where valuation orders are used, the customs value will be determined by an adjustment to the price paid (e.g. invoice price plus x%), but alternative methods of determining the customs value can also be used.

Where a valuation order is in place the importer must declare the customs value based on the terms of the valuation order. The valuation order only applies to goods supplied by the seller named in the valuation order. The importer may also be importing goods from other suppliers where there is no relationship and where the price paid or payable is an acceptable basis for customs valuation.

Customs staff should be aware that the customs value is an important component for calculating the duty and should bear in mind the possible need for a valuation order in certain situations. The need for a valuation order can be identified in various ways:

- The information in AIS Data Element 4/13 can indicate a relationship between the importer and the supplier;
- A query from an importer who has doubts about how to calculate the correct value of his goods could point towards the need for a valuation order;
- An officer carrying out documentary checks or physical checks of goods at the point of entry may be able to identify the need for a valuation order in for certain importers.

Where the possible need for a valuation order is identified the matter should be referred to the relevant district that deals with the importer. There is no necessity to delay clearance of any consignment of goods unless the invoice price is clearly not an acceptable basis for valuation. In a case where the valuation cannot be accepted the importer should be requested to pay a suitable additional amount of duty on deposit in order to clear the goods pending resolution of the valuation issue.
18.2 Processing a valuation order.

The district dealing with the trader should examine the information available, for example:

- details coming from the import station;
- information arising as a result of a post clearance check or audit;
- examination of relevant AIS Data Elements including D/E 4/13 on AIS.

If the district decide that a valuation order may be appropriate for a specific importer and his supplier or suppliers, they should contact the importer seeking all relevant information regarding valuation of the goods. This may include:

- Details of importations including the value declared for customs duty purposes and cost, insurance and freight charges;
- Sample vendor invoices and import invoices for the importations;
- A breakdown of the differences that occur, if any, between vendor and import invoices;
- Any other relevant information.

Based on the information provided by the importer, the district should make a decision as to whether customs values based on the price paid are acceptable or whether a valuation order is necessary. In making this decision staff can consult with Customs Division or LCD as necessary. Where it is determined that a valuation order is necessary the matter will usually need to be discussed further with the importer in order to agree the terms of the order. The valuation order should then specify the value for customs purposes of the specific goods covered by the order which have been bought by the importer from a specific supplier.

18.3 Procedure for issuing a valuation order

The valuation order is signed at Principal Officer level and remains in force until reviewed.

Regional or LCD staff will input the valuation order in CRS and issue the letter to the trader. The trader will be given the right to be heard if he is unhappy with the terms laid down in the valuation order.

A copy of the valuation order and of the papers relating to that order must be forwarded to the Valuation Section where a central record of all valuation orders is maintained. Valuation Section will circulate a copy of valuation orders to the Regions and LCD for dissemination as necessary. If changes to the circumstances of importation or trading relationships with suppliers change, the trader is obliged to notify Revenue.

See Appendix D for an example of a valuation order

18.4 Use of the valuation order

Valuation orders bear an individual number, which the declarant should quote, on the entry and on the valuation declaration form when importing the goods that are the subject of that order.
Where there is a valuation adjustment to be made as a result of the data in AIS Data Element 4/13 (valuation indicators), the declarant must declare the code N934 in Data Element 2/3 of AIS.

19 Customs Value Authorisation (CVA) for the simplification of the determination of amounts being part of the customs value of goods

19.1 What is a Customs Value Authorisation (CVA)?

A Customs Value Authorisation (CVA) is a formal determination of the value to be declared on customs declarations in certain cases. Under Article 73 of the UCC and Article 71 of the UCC DA, customs authorities may authorise elements of the customs value to be determined on the basis of specific criteria where they are not quantifiable on the date of acceptance of the declaration. These simplifications are requested by traders on the Customs Decisions System (CDS).

19.2 Processing a Customs Value Authorisation (CVA)

The trader applies for the authorisation via the CDS Trader Portal. The elements of customs value that may be simplified are:
- The price actually paid or payable being the total payment made or to be made by the buyer to the seller or by the buyer to a third party for the benefit of the seller for the imported goods and include all payments made or to be made as a condition of sale of the imported goods (A.70.2 UCC);
- commissions and brokerage, except buying commissions (A. 71 UCC);
- the cost of containers which are treated as being one, for customs purposes, with the goods in question (A. 71 UCC);
- the cost of packing, whether for labour or materials (A. 71 UCC);
- the value, apportioned as appropriate, of the following goods and services where supplied directly or indirectly by the buyer free of charge or at reduced cost for use in connection with the production and sale for export of the imported goods, to the extent that such value has not been included in the price actually paid or payable:
  (i) materials, components, parts and similar items incorporated into the imported goods;
  (ii) tools, dies, moulds and similar items used in the production of the imported goods;
  (iii) materials consumed in the production of the imported goods; and
  (iv) engineering, development, artwork, design work, and plans and sketches undertaken elsewhere than in the Union and necessary for the production of the imported goods;
- royalties and licence fees related to the goods being valued that the buyer must pay, either
directly or indirectly, as a condition of sale of the goods being valued, to the extent that such
royalties and fees are not included in the price actually paid or payable;
- the value of any part of the proceeds of any subsequent resale, disposal or use of the imported
goods that accrues directly or indirectly to the seller; and
- the following costs up to the place where goods are brought into the customs territory of the
Union:
  (i) the cost of transport and insurance of the imported goods; and
  (ii) loading and handling charges associated with the transport of the imported goods.
- the cost of transport of the imported goods after their entry into the customs territory of the
Union;
- charges for construction, erection, assembly, maintenance or technical assistance, undertaken
after the entry into the customs territory of the Union of the imported goods such as industrial
plants, machinery or equipment;
- charges for interest under a financing arrangement entered into by the buyer and relating to the
purchase of the imported goods, irrespective of whether the finance is provided by the seller or
another person, provided that the financing arrangement has been made in writing and, where
required, the buyer can demonstrate that the following conditions are fulfilled:
  (i) such goods are actually sold at the price declared as the price actually paid or payable;
  (ii) the claimed rate of interest does not exceed the level for such transactions prevailing in the
country where, and at the time when, the finance was provided;
- charges for the right to reproduce the imported goods in the Union;
- buying commissions;
- import duties or other charges payable in the Union by reason of the import or sale of the goods;
- payments made by the buyer for the right to distribute or resell the imported goods, if such
payments are not a condition of the sale for export to the Union of the goods.

19.3 Procedure for issuing a CVA

The application for the CVA authorisation is received electronically in the Valuation Section on
CDS. Valuation Section will send the application to the relevant customs officer for consideration.
Based on the information provided by the importer, the customs officer should make a decision as
to whether customs value authorisation is justified. The customs officer then sends a
recommendation to Valuation Section where the authorisation will be issued or refused on CDS.

19.4 Use of a CVA

Declarants should quote the CVA reference number on the AIS entry in Data Element 2/3 using
certificate code C504.
20 Cases of Doubt or Difficulty

Valuation issues should be dealt with as follows:

(i) Customs Auditors will cover non-complex valuation matters;
(ii) LCD will deal with complex valuation issues and will provide advice on operational matters where necessary;
(iii) Customs Division will deal with policy issues as they arise.

The following material is either exempt from or not required to be published under the Freedom of Information Act 2014.

[...]

Appendix A - Examples of documents which may be required by the customs authorities for customs valuation purposes

The following examples which are not exhaustive, indicate some of the documents which the customs authorities may require, depending on the circumstances of the transaction and/or in case of doubt in respect of some or all of the particulars declared. Customs has the authority to keep the documentation presented.

A commercial invoice for the goods, if any, not a pro-forma invoice

A pro-forma invoice is not a legally binding document and are not acceptable as supporting documents for a declared transaction value. However, for goods that have been subject to a “sale”, such documents are regarded as provisional and should be replaced subsequently by a definitive final invoice.

However there are also cases where the goods have been sold without any invoice. In these cases the declarant has to supply the documents that could be regarded as equivalent to the invoice. An invoice may not only be used to reflect the price referred to in Article 70 of the Code, but also to reflect other particulars, such as the following:

- the price of goods when resold in the EU, for the purposes of applying the deductive method laid down in Article 142 of the UCC IA;
- the elements for which an adjustment is provided for under Article 71 of the Code.

A contract of sale can be used or required in support of various aspects of the invoice, such as:

- Any possible restriction, condition or consideration,
- Any possible arrangement between the seller and the buyer affecting the customs value of the goods,
- Activities undertaken after importation,
- Any proceeds and resale,
- The currency in which a price is settled,
- A fixed rate of exchange,
- Indirect payments,
- Contracts and other documents concerning production rights for the imported goods.

A royalty contract for establishing whether or not a royalty payment should be included in the customs value and, if so, to what extent.

An agency contract for establishing an addition for commissions or brokerage or for the exclusion of a buying commission.

Transport and insurance documents for the purpose of determining, inter alia:
- The terms of delivery,
- The costs of delivery to the place of introduction, and
The costs of transport after arrival at the place of introduction.

**Accounting records**, notably those of the importer or buyer, for reasons such as ascertaining the actual transfer of funds to the exporter or seller, or for obtaining information on commissions, profit or general expenses in applying the deductive and computed value methods.

**Other documents**, e.g.:
Concerning the ownership of the companies involved in the transaction, for establishing a possible relationship between the seller and the buyer (Ad Article 134 of the UCC IA),
The invoice and contract of sale or transfer of quota charges,
The invoice for payments made for certificates of authenticity,
**Contracts** for advertising, marketing and other activities undertaken before or/and after importation,

**Financial documents**, e.g. for establishing the amount of interest charges,

**Contracts**, licensing agreements or other documents concerning copyrights,

**Relevant** documents relating to assists,
Documentation on transfer pricing systems (transfer pricing report or study);

**Experts’ opinions**.
If during customs proceedings specialist knowledge is needed, it is open to the customs authorities to call an expert. In the event that a Region is considering such a course of action the Valuation Section should be consulted.

The authorities shall not disclose any information which is confidential by nature except in accordance with Article 12 of the Code.
Appendix B - SPV

Notice by the Revenue Commissioners

Customs values, established under the simplified procedure system for certain fruit and vegetables

During the period commencing on dd/m/yyyy and terminating on dd/m/yyyy the following values should be taken to be the value for the purposes of assessing Customs duty on the fruit and vegetables referred to.

Appendix C – Annex 23-01

Annex 23-01 of Regulation (EU) 2015/2447

Air transport costs to be included in the customs value

1. The following table shows:
   a) third countries listed by continents and zones - column 1.
   b) the percentages which represent the part of the air transport costs from a given third country to the EC to be included in the customs value - column 2.

2. When goods are shipped from countries or from airports not included in the following table, other than the airports referred to in paragraph 3, the percentage given for the airport nearest to that airport of departure shall be taken.

3. As regards the French overseas departments of Guadeloupe, Guyana, Martinique and Reunion, of which territories the airports are not included in the table, the following rules shall apply:
   a) for goods shipped direct to those departments from third countries, the whole of the air transport cost is to be included in the customs value;
   b) for goods shipped to the European part of the EU from third countries and transshipped or unloaded in one of those departments, only the air transport costs which would have been incurred for carrying the goods only as far as the place of transshipment or unloading are to be included in the customs value;
   c) for goods shipped to those departments from third countries and transshipped or unloaded in an airport in the European part of the EU, the air transport costs to be included in the customs value are those which result from the application of the percentages given in the following table to the costs which would have been incurred for carrying the goods from the airport of departure to the airport of transshipment or unloading.

The transshipment or unloading shall be certified by an appropriate endorsement by the customs authorities on the air waybill or other air transport document, with the official stamp of the office concerned; failing this certification the provisions of the last subparagraph of Article 137 shall apply.

Appendix D - Sample of a Valuation Order
(covering a mix of various possible scenarios)

Valuation Order No. X/2014

Large Cases Division,
Healthcare, ICT and Manufacturing Unit.

The value for customs purposes of Medical Products imported by ABC Labs Ireland, from DEF Ltd., USA may be taken as the invoice price plus 6% plus any dutiable charges not included in such prices (freight, insurance, etc.), provided that in each case the Officers concerned are satisfied and subject to the customary checks exercised by this Unit.

Acceptance of duty on this basis is on the understanding:
- that the importers are buying the goods outright on their own account;
- that the invoice prices are not in any way influenced by the importer’s relationship with the supplier;
- that [apart from the assist of US$ X for the provision of moulds in respect of which duty in the amount of US$ Y has been paid per AIS declaration XXXXXXX dated xx/xx/xx] the invoice price is the total amount payable directly or indirectly to the supplier in respect of the transaction,

- The number and date of this Order are to be shown on the import declaration in AIS Data Element 2/3 (Documents produced, certificates and authorisations, additional references).
- Any persons acting on your behalf in a customs clearance capacity should be made aware of this decision. Digit ‘1’ should appear in AIS Data Element 4/13 (valuation indicators) reflecting the particular valuation indicator which is relevant to the valuation of the goods concerned, code 1 (one) in Data Element 4/16 (valuation method), code 1D02 in Data Element 2/3 (Documents produced, certificates and authorisations, additional references), with the above valuation order number.
- [If applicable, for example, ‘The appropriate uplift amount should appear in Data Element 2/3 of the AIS entry and must be added to the invoice price plus dutiable charges and reflected as the statistical value in Data Element 8/6(statistical value)’].
- Any dutiable charges (freight, insurance, etc.) not included in the invoice price are to be shown separately on the import declaration.

This arrangement is to be reviewed (periodically) and is subject to the conditions:

(1) that the importers’ records relating to these transactions are made available for inspection by the Officers of this Unit when required;

(2) that the importers shall, on request, supply any further information or documentation required in relation to the valuation of these imports.
Any change in the circumstances of importation or in the importers’ trading relationship with the suppliers should be notified to this Unit by the importer without delay. Valuation Order X/2009 is hereby cancelled.

On receiving this letter, it is open to you to reply in writing to this office within ten working days, outlining your reasons for suggesting an alternative Valuation method.

Please respond within ten working days, in this regard.

____________________
Principal Officer,
Large Cases Division.

Note sent to Valuation Section from Region/LCD

From: Region/LCD

To: Classification Origin and Valuation Section

Reference: xxxxxxx

A customs valuation enquiry into the customs value of imports for the above trader has now been completed and a Valuation Order and Letter X/2011 have now been signed by the Principal Officer. Please distribute copies of the Valuation Order to the relevant Import Stations. [Please also advise stations that the Valuation Order X/2011 is cancelled.] The Valuation Letter will be issued to the trader from this office. The main file (above ref.) has been noted.
The following material is either exempt from or not required to be published under the Freedom of Information Act 2014.
