1. Introduction

Sections 766, 766A and 766B of the Taxes Consolidation Act (TCA) 1997 (the Act) and the [Taxes Consolidation Act \(Prescribed Research and Development Activities Regulations\) 2004 \(S.I No. 434/2004\)](#) provide for a tax credit for certain expenditure on research and development (R&D) activities, plant and machinery and buildings ('R&D tax credit'). Credit is given at 25% of allowable expenditure.

Finance Act 2022 introduced sections 766C and 766D to the Act. For accounting periods commencing on or after 1 January 2023, claims for the R&D corporation tax credit are required to be made under section 766C and/or section 766D, as the case may be ('R&D corporation tax credit').

The credit is given at 25% of allowable expenditure for accounting periods ending on or before 31 December 2023. For accounting periods commencing on or after 1 January 2024, the credit is given at 30% of allowable expenditure¹. The definitions in section 766 and section 766A apply to section 766C and section 766D.

Subject to meeting certain conditions, a company may elect to make a claim for either the R&D tax credit under section 766 and/or section 766A or the R&D corporation tax credit under section 766C and/or section 766D for a transitional period, which in general applies in respect of accounting periods ending between 31 December 2022 and 30 December 2023 (please see [section 2.1](#) for further details).

A company may elect to accelerate repayable credits due in respect of an R&D tax credit claim made in accounting periods commencing before 1 January 2022. A claim to accelerate the payments may be made in a return for an accounting period commencing on or after 1 January 2022.

For accounting periods beginning on or after 1 January 2024, all qualifying R&D expenditure is eligible for the 30% R&D corporation tax credit². For accounting periods beginning on or after 1 January 2015 and on or before 31 December 2023, all qualifying R&D expenditure is eligible for the 25% R&D credit³.

For accounting periods beginning on or after 1 January 2024, companies intending to claim the R&D corporation tax credit for the first time or companies which have not claimed the credit in the previous three years will be required to notify Revenue in advance of making their claim (please see [section 8.6](#) for further details)⁴.

References in this TDM to the 'R&D credit' include both the R&D tax credit under section 766 and section 766A and the R&D corporation tax credit under section 766C and section 766D, unless otherwise stated.

¹ Finance (No. 2) Act 2023, section 34(c)(1) and section 34(d)(1)

² Section 766C(1) and section 766D(1) TCA 1997 as introduced by Finance (No.2) Act 2023

³ For accounting periods commencing prior to 1 January 2015 the amount of "qualifying expenditure" is restricted to incremental expenditure over expenditure in a base year (2003), defined as the "threshold amount".

2. General Scheme

2.1 Basic requirements for qualification⁵

To qualify for the R&D credit, the following must apply:

- the applicant must be a company.⁶
- the company must be within the charge to Irish tax.
- the company must undertake qualifying R&D activities within the European Economic Area (EEA) or the UK.
- in the case of an Irish tax resident company, the expenditure must not qualify for a tax deduction under the law of another territory.

Qualifying activities must satisfy **all** of the following conditions⁷. They must—

1. be systematic, investigative or experimental activities;
2. be in a field of science or technology;
3. involve one or more of the following categories of R&D—
 - a. basic research,
 - b. applied research, **or**
 - c. experimental development.

In addition, they must:

4. seek to achieve scientific or technological advancement; **and**
5. involve the resolution of scientific or technological uncertainty.

The R&D credit is calculated separately from the normal deduction of the R&D expenditure in computing the taxable profits of the company⁸. Companies claiming the R&D credit are not required to hold the intellectual property rights resulting from the R&D work. Equally, there is no requirement for the R&D work to be successful. The definition of qualifying R&D activity requires that a claimant company engage in systematic activity which seeks to achieve a scientific or technological advancement, and which involves the resolution of scientific or technological uncertainty.

The Finance Act of 2012 introduced an allowable amount to be excluded from the incremental basis of calculation. This allowed the first €100,000 of qualifying R&D expenditure to qualify for the credit, regardless of the base year (2003) expenditure. This amount was increased for 2013 and 2014.

Prior to 2012, the qualifying R&D expenditure was reduced in full by the base-year expenditure in calculating the relief.

⁴ Section 766C(17) and section 766D(16) TCA 1997 as introduced by Finance (No.2) Act 2023

⁵ Section 766(1)(a) TCA 1997 – in the definition of “qualified company”.

⁶ Section 766 generally provides rules relating to groups of companies but provides that where a company is not part of a group the company shall be treated as a group comprising that one company. For ease of reading the singular term “company” is used throughout these guidelines. See also Section 7 of these Guidelines for further information with regard to groups.

⁷ Section 766(1)(a) TCA 1997 – in the definition of “research and development activities”.

⁸ Where the relevant accounting standard allows the company to recognise the value of the R&D credit in its financial statements any amount so included in the calculation of accounting profit/loss may be deducted in the calculation of taxable profit/loss.

All claims for the R&D tax credit (under section 766) and the R&D corporation tax credit (under section 766C) must be made within 12 months from the end of the accounting period in which the expenditure was incurred. A claim in respect of expenditure on buildings and structures to be used for R&D (under section 766A or section 766D) must be made within 12 months from the end of the accounting period in which the relevant expenditure was incurred (for more detail see [Part 5](#) of these Guidelines). An R&D corporation tax credit claim in respect of an accounting period that commences on or after 1 January 2023 can only be filed under section 766C or section 766D. A claim cannot be made under section 766 or section 766A for an accounting period that commences on or after 1 January 2023. A claim may be made by completing the relevant sections of the Form CT1 through the Revenue Online System (ROS)⁹.

For a transitional period a company may elect to make either an R&D tax credit claim under section 766 and/or section 766A, or an R&D corporation tax credit claim under section 766C and/or section 766D. In general, this applies in respect of an accounting period ending between 31 December 2022 and 30 December 2023.

A company may make a claim to accelerate the payment of a second and final instalment due in respect of an accounting period that commenced before 1 January 2022. A claim to accelerate the payments may be made in a return for an accounting period commencing on or after 1 January 2022 under section 766(4D) and/or section 766A(4C).¹⁰

2.2 Calculating the credit

For expenditure incurred in accounting periods commencing on or after 1 January 2009, the R&D tax credit and the R&D corporation tax credit is calculated as 25% of qualifying expenditure. The definitions set out in sections 766 and 766A are also applicable to section 766C and section 766D.

Example no. 1a [25% R&D tax credit rate]:

In the 12 months ended 31 December 2022, PQ Ltd incurred €500,000 of qualifying R&D expenditure.

The tax credit is calculated as follows:

Qualifying R&D expenditure (period ended 31/12/2021)	€500,000
R&D Tax Credit:	€500,000 @25%
	€125,000

⁹ Part 41A, TCA 1997

¹⁰ For claims for 2022 only, an R&D Specified Return was required to be submitted along with the Form CT1 2022 where a company was making a claim under section 766C, section 766D, section 766(4D) or section 766A(4C). For all subsequent periods, claims should be made on the Form CT1 only.

For expenditure incurred in accounting periods commencing on or after 1 January 2024, the R&D corporation tax credit is calculated as 30% of qualifying expenditure.

Example no. 1b [30% R&D corporation tax credit rate]:

In the 12 months ended 31 December 2024, PQ Ltd incurred €500,000 of qualifying R&D expenditure.

The R&D corporation tax credit is calculated as follows:

Qualifying R&D expenditure (period ended 31/12/2024)	€500,000
R&D Corporation Tax Credit: €500,000 @30%	€150,000

2.2.1 Claims for the R&D tax credit under section 766 or section 766A

Where an R&D tax credit claim is made under section 766 or section 766A, the credit is first used to reduce the liability to Corporation Tax (CT) for that accounting period.

Where a company has insufficient CT against which to claim the R&D tax credit in a given accounting period, the R&D tax credit may be offset against the CT liability for the preceding period or may be carried forward indefinitely. The R&D tax credit can also be claimed by the company as a payable credit (see [section 2.3](#)).

For accounting periods commencing on or after 1 January 2023, a claim for the R&D corporation tax credit can only be made under section 766C and/or section 766D.

2.2.2 Claims for the R&D corporation tax credit under section 766C or section 766D

Finance Act 2022 introduced changes to the way in which the R&D corporation tax credit can be utilised and these changes are provided for in section 766C and section 766D. The changes apply in respect of R&D corporation tax credit claims made in returns with a specified return date on or after 23 September 2023. In general, this means the changes apply in respect of accounting periods ending 31 December 2022 or later.

Where an R&D corporation tax credit claim is made under section 766C or section 766D, the R&D corporation tax credit is not used to reduce the liability to CT for that accounting period, rather the company may claim an amount equal to 25% (or 30% for accounting periods commencing on or after 1 January 2024) of qualifying expenditure attributable to the company, which is available in three annual instalments¹¹. The company **must specify**

¹¹ Section 766C(6), TCA 1997

for each instalment whether all of the R&D corporation tax credit or a portion of it should be treated as an overpayment of tax (and offset against tax liabilities of the company) or paid to the company by Revenue¹².

For a transitional period, companies can continue to claim the R&D tax credit under section 766 and/or section 766A for accounting periods commencing before 1 January 2023. Companies with accounting periods which have a specified return date on or after 23 September 2023 can elect to claim the R&D corporation tax credit under the new provisions in section 766C and/or section 766D. In general, this applies in respect of accounting periods ending between 31 December 2022 and 30 December 2023 (please see [section 2.1](#) for further details).

A company may only make a claim, in respect of qualifying expenditure, under the R&D tax credit¹³ or the R&D corporation tax credit¹⁴ in an accounting period.

For the operation of the R&D tax credit and R&D corporation tax credit in respect of group company and key employee provisions, see [section 7](#) and [section 9](#) respectively.

2.3 Payable credits¹⁵

2.3.1 Payment of the R&D tax credit under section 766 or section 766A

Where a company has offset the R&D tax credit against its CT liability of the current and preceding accounting periods and an excess amount still remains, the company may make a claim to have the amount of that excess paid to it by Revenue in three instalments over a period of 33 months.

The first instalment to be paid will amount to 33% of the excess amount and becomes payable not earlier than the CT pay and file date for the company's accounting period in which the R&D expenditure was incurred.

The remaining balance of the excess amount will then be used to reduce the company's CT liability of the next accounting period (if it has not otherwise been discharged), and if any of the excess amount still remains, a second instalment amounting to 50% of that amount remaining will become payable not earlier than 12 months after the CT pay and file date for the accounting period in which the R&D expenditure was incurred.

Any excess amount still remaining will then be used to reduce the company's CT liability of the following accounting period (if it has not otherwise been discharged), and if any part of the excess amount still remains, that amount will become payable not earlier than 24

¹² Section 766C(7), TCA 1997

¹³ Section 766 and section 766A TCA 1997

¹⁴ Section 766C and section 766D TCA 1997

¹⁵ Section 766(4B) TCA 1997.

months after the CT pay and file date for the accounting period in which the R&D expenditure was incurred.

Payable credits are claimed on the Corporation Tax Return (Form CT1). No supporting documentation in relation to qualifying R&D activity is required to be submitted at the point of filing the Form CT1.

Example no. 2:

In the accounting period ended 31 December 2019, PSR Ltd. incurred €400,000 qualifying expenditure on R&D. The following shows the company's CT liability:

<u>Accounting Period</u>	<u>Liability</u>
12 months ended 31 December 2018	€30,000
12 months ended 31 December 2019	€15,000
12 months ended 31 December 2020	€11,000
12 months ended 31 December 2021	€10,000

The R&D tax credit due in respect of year ended 31 December 2019 is €100,000 (i.e. €400,000 @25%). The CT liability for 2019 is €15,000, which will be covered by this credit. The remaining R&D tax credit of €85,000 may be carried forward and used to reduce the CT liability for the next and subsequent accounting periods.

Alternatively, the company may make a claim to:

1. Offset €30,000 of the remaining R&D tax credit against the CT liability of the preceding period (year ended 31 December 2018). That liability will be reduced to nil; a refund of €30,000 will be due (assuming the liability for 2018 was previously paid and that a timely claim to repayment is made) and the excess credit remaining will be reduced to €55,000.
2. Revenue will pay 33% of the remaining credit to the company as a first instalment. That payment of €18,150 (€55,000 @ 33%) will be paid not earlier than 21 September 2020. The excess credit remaining will be reduced to €36,850.
3. €11,000 of the unused credit will be offset against the CT liability for year ended 31 December 2020, leaving a balance of excess credit of €25,850.
4. Revenue will pay 50% of the remaining balance to the company as a second instalment. That payment of €12,925 (€25,850 @ 50%) will be paid not earlier than 21 September 2021.
5. €10,000 of the remaining unused credit will be offset against the CT liability for the year ended 31 December 2021, leaving a balance of unused credit of €2,925.
6. Revenue will pay the balance of €2,925 to the company as the third instalment, not earlier than 21 September 2022.

(Note: The current year R&D is always offset first, before any R&D credits carried forward are used – see [section 2.9](#))

For accounting periods commencing on or after 1 January 2023, a claim for the R&D corporation tax credit can only be made under section 766C and/or section 766D only.

2.3.2 Accelerated payment of the second and last instalment of the R&D tax credit under section 766(4D) and section 766A(4C)

For companies with accounting periods that commenced prior to 1 January 2022, where an R&D tax credit claim has resulted in a payment of a first instalment as set out in [section 2.3.1](#), they can make a claim to accelerate any second or last instalment which may be due to the company in an accounting period commencing on or after 1 January 2022 and have it paid by Revenue¹⁶. The claim should be made in respect of the excess amount of the credit as set out in example no. 3:

Example no. 3:

K Ltd has an accounting period ending 31 December. In its accounting period ended 31 December 2022, the company did not incur qualifying R&D expenditure and did not have a CT liability. The company brought forward excess R&D tax credits of €107,000 made up as follows:

- 2nd instalment and last instalment brought forward from 2021 of €67,000
- Last instalment brought forward from 2020 of €40,000

The company can make a claim to accelerate the repayment of the excess R&D instalments of €107,000 brought forward from 2021 and 2020 in accordance with section 766(4D) TCA 1997. That claim can be made in the R&D specified return for the accounting period ended 31 December 2022 (being an accounting period that commenced on or after 1 January 2022).

The acceleration of the repayment of the excess R&D instalments operates as follows:

2021 Second and last instalments brought forward - €67,000

2 nd instalment – 50% of the excess (section 766(4B)(ii)(II))	€33,500
Last instalment – balance remaining (section 766(4B)(iii)(II))	€33,500
<i>Total</i>	€67,000

2020 Last instalment brought forward - €40,000

Last instalment – balance remaining (section 766(4B)(iii)(II))	€40,000
--	---------

R&D tax credits which are accelerated under section 766(4D)

2 nd instalment in respect of 2021 (section 766(4B)(ii)(II))	€33,500
Last instalment in respect of 2020 and 2021 (section 766(4B)(iii)(II))	€73,500*
<i>Total amount of accelerated R&D instalment</i>	€107,000

*The last instalment is the last instalment of the 2021 and 2020 R&D tax credit claims €33,500 + €40,000

¹⁶ Section 766(4D) TCA 1997

Where a company is accelerating the second and/or last instalment, this should be claimed on the Form CT1 for 2023. For claims made in respect of qualifying expenditure incurred in 2022 only, the company was required to provide certain information on the Form CT1 2022 and the R&D Specified Return 2022.¹⁷

Where a company claims the R&D tax credit under section 766 or section 766A, the R&D tax credit can be utilised as set out above in [section 2.2](#) and [section 2.3.1](#). For accounting periods commencing on or after 1 January 2023, the claim must be made in accordance with section 766C or section 766D and will be paid as set out in [section 2.4](#).

2.4 R&D Corporation Tax Credit calculated under section 766C and section 766D

For claims for the R&D corporation tax credit under section 766C or section 766D, the R&D corporation tax credit will be available in three annual instalments¹⁸. A company **must specify** in respect of each instalment whether the instalment, or a portion of the instalment, is to be –

- treated as an overpayment of tax for the purposes of section 960H, or
- paid to the company by Revenue.

The specification in respect of each instalment must be made on the Form CT1 when a company is making a claim for the credit.

2.4.1 Annual Instalments under section 766C

For **accounting periods commencing on or after 1 January 2023 and before 1 January 2024**, or for companies with a specified return date on or after 23 September 2023 which elected to claim the R&D corporation tax credit in accordance with section 766C and/or section 766D, the three annual instalments are calculated as follows:

- 1) the first instalment is the greater of:
 - **€25,000** (or the amount of the R&D corporation tax credit claimed, if lower),
or
 - 50% of the amount of the R&D corporation tax credit claimed,
- 2) the second instalment is based on three fifths of any balance of the remaining R&D corporation tax credit, and

¹⁷ For further guidance on completing the relevant forms, please see <https://www.revenue.ie/en/tax-professionals/tdm/income-tax-capital-gains-tax-corporation-tax/part-29/29-02-03A.pdf>

¹⁸ Section 766C(6) TCA 1997

- 3) the third instalment is any balance of the R&D corporation tax credit remaining, being the credit claimed less the first and second instalment amounts already claimed.

Example no. 4:

A company claims an R&D corporation tax credit of €20,000 in respect of the accounting period ended 31 December 2023.

The first instalment is the greater of €25,000 or the credit claimed if lower, or 50% of the credit claimed.

Therefore, the first instalment due to the company is €20,000.

There is no remaining balance to be claimed as a second or third instalment.

Example no. 5:

A company claims an R&D corporation tax credit of €40,000 in respect of the accounting period ended 31 December 2023.

The first instalment is the greater of €25,000 or the credit claimed if lower, or 50% of the credit claimed.

Therefore, the first instalment due to the company is €25,000. The balance of the R&D corporation tax credit of €15,000 (i.e. €40,000 - €25,000) may be claimed as a second and third instalment.

The second instalment is the R&D corporation tax credit less the first instalment x 3/5. Therefore, the second instalment amount to be claimed is €9,000 (i.e. €15,000 x 3/5).

The third instalment is the amount of the R&D corporation tax credit claimed less the first and second instalments. Therefore, the final instalment amount to be claimed is €6,000 (i.e. €40,000 - €25,000 - €9,000).

Example no. 6:

A company claims an R&D corporation tax credit of €100,000 in respect of the accounting period ended 31 December 2023.

The first instalment is the greater of €25,000 or the credit claimed if lower, or 50% of the credit claimed.

Therefore, the first instalment due to the company is €50,000. The balance of the R&D corporation tax credit of €50,000 (i.e. €100,000 - €50,000) may be claimed as a second and third instalment.

The second instalment is the R&D corporation tax credit less the first instalment x 3/5. Therefore, the second instalment amount to be claimed is €30,000 (i.e. €50,000 x 3/5).

The third instalment is the amount of the R&D corporation tax credit claimed less the first and second instalments. Therefore, the final instalment amount to be claimed is €20,000 (i.e. €100,000 - €50,000 - €30,000).

For **accounting periods commencing on or after 1 January 2024**, the three annual instalments are calculated as follows:

- 1) the first instalment is the greater of:
 - **€50,000** (or the amount of the R&D corporation tax credit claimed, if lower), or
 - 50% of the amount of the R&D corporation tax credit claimed,
- 2) the second instalment is based on three fifths of any balance of the remaining R&D corporation tax credit, and
- 3) the third instalment is any balance of the R&D corporation tax credit remaining, being the credit claimed less the first and second instalment amounts already claimed.

Example no. 7:

A company claims an R&D corporation tax credit of €40,000 in respect of the accounting period ending 31 December 2024.

The first instalment is the greater of €50,000 or the credit claimed if lower, or 50% of the credit claimed.

Therefore, the first instalment due to the company is €40,000.

There is no remaining balance to be claimed as a second or third instalment.

Example no. 8:

A company claims an R&D corporation tax credit of €60,000 in respect of the accounting period ending 31 December 2024.

The first instalment is the greater of €50,000 or the credit claimed if lower, or 50% of the credit claimed.

Therefore, the first instalment due to the company is €50,000. The balance of the R&D corporation tax credit of €10,000 (i.e. €60,000 - €50,000) may be claimed as a second and third instalment.

The second instalment is the R&D corporation tax credit less the first instalment x 3/5. Therefore, the second instalment amount to be claimed is €6,000 (i.e. €10,000 x 3/5).

The third instalment is the amount of the R&D corporation tax credit claimed less the first and second instalments. Therefore, the final instalment amount to be claimed is €4,000 (i.e. €60,000 - €50,000 - €6,000).

For **each** instalment, the company **must specify**, on the Form CT1, whether that amount, or any portion of that amount, should be treated as an overpayment of tax, and offset against its tax liabilities, or paid to the company by Revenue¹⁹.

Where a company elects for the first instalment of the R&D corporation tax credit to be treated as an overpayment of tax which is then set, in whole or in part, against its CT liability for the accounting period, the amount offset against that CT liability may be taken into account in the calculation of the company's preliminary corporation tax for that accounting period and the subsequent accounting period²⁰. This election applies in respect of the first instalment only and the amount of the company's CT liability is reduced by the amount of the credit that is offset.

Example no. 9:

A company claims an R&D corporation tax credit for the accounting period ending 31 December 2024 of €70,000 and has a CT liability of €60,000 for that accounting period.

The first instalment is the greater of €50,000 or the credit claimed if lower, or 50% of the credit claimed.

Therefore, the first instalment due to the company is €50,000. The balance of the R&D corporation tax credit of €20,000 (i.e. €70,000 - €50,000) may be claimed as a second and third instalment, for the accounting periods ending 31 December 2025 and 31 December 2026, respectively.

The company specifies that the first instalment of €50,000 is to be treated as an overpayment of tax and therefore will be offset against the CT liability for the accounting period ending 31 December 2024. For preliminary tax purposes this amount is taken into account when determining the amount of preliminary tax due for the subsequent accounting period. Therefore, preliminary tax due for accounting period ending 31 December 2025 (based on 100% of prior year's CT liability) is €10,000.

If the company opted for the first instalment to be paid, then the amount of preliminary tax due for accounting period ending 31 December 2025 would be €60,000.

¹⁹ Section 766C(7) TCA 1997; section.960H TCA 1997

²⁰ Section 766C(13) TCA 1997

Where a company elects to have the R&D corporation tax credit, or a portion of it, offset against its tax liabilities, and an amount of credit remains following the offset (known as 'the excess'), the company can make a claim to have the excess, or part of it, surrendered to key employees²¹. The amount surrendered cannot exceed the CT liability of the company in the relevant accounting period.

2.4.2 Annual Instalments under section 766D

The three annual instalments are calculated as follows:

- 1) the first instalment is 50% of the amount of the R&D corporation tax credit claimed,
- 2) the second instalment will be three-fifths of the balance remaining after payment of the first instalment, and
- 3) the third instalment will be the balance of the R&D corporation tax credit remaining, being the credit less the first and second instalments²².

For **each** instalment, the company **must specify**, on the Form CT1, whether that amount, or any portion of that amount, should be treated as an overpayment of tax, and offset against its tax liabilities, or repaid to the company by Revenue²³.

Where a company elects for the first instalment of the credit, or a portion of it, to be treated as an overpayment of tax which is then set against its CT liability for the accounting period, the amount offset against that CT liability may be taken into account in the calculation of the company's preliminary corporation tax for that accounting period and the subsequent accounting period²⁴. This election applies in respect of the first instalment only and the amount of the company's CT liability is reduced by the amount of the credit that is offset.

Where a company, which is a member of a group of companies, elects to have the R&D corporation tax credit, or a portion of it, offset against its tax liabilities and an amount of credit remains following the offset (known as 'the excess'), the company can make a claim to have this excess, or part of it, surrendered to another company which is a member of that group. The excess surrendered can be treated as an overpayment of tax by that other group company for its corresponding accounting period²⁵.

Example no. 10:

B Ltd incurred qualifying expenditure of €1,000,000 in the accounting period ending 31 December 2023 and €1,000,000 in the accounting period ending 31 December 2024 on the construction of a building which is used wholly and exclusively for qualifying R&D activities.

²¹ Section 766C(2) TCA 1997

²² Section 766D(5) TCA 1997

²³ Section 766D(6) TCA 1997

²⁴ Section 766D(12) TCA 1997

²⁵ Section 766D(2) TCA 1997

The R&D corporation tax credit for each year is calculated as follows:

2023 R&D corporation tax credit claim:

€1,000,000 @ 25% = €250,000

First instalment = €125,000 (50% of the credit)

Second instalment = €75,000 (The credit less the first instalment x 3/5)

Last instalment = €50,000 (The credit less the first and second instalments)

The company specifies that the first instalment of €125,000 is to be treated as an overpayment of tax and therefore will be offset against the CT liability of €150,000 for the accounting period ending 31 December 2023. For preliminary tax purposes this amount is taken into account when determining the amount of preliminary tax due for the subsequent accounting period. Therefore, preliminary tax due for accounting period ending 31 December 2024 (based on 100% of prior year's CT liability) is €25,000.

If the company opted for the first instalment to be paid, then the amount of preliminary tax due for accounting period end 31 December 2024 would be €150,000.

2024 R&D corporation tax credit claim:

€1,000,000 @ 30% = €300,000

First instalment = €150,000 (50% of the credit)

Second instalment = €90,000 (The credit less the first instalment x 3/5)

Last instalment = €60,000 (The credit less the first and second instalments)

The company specifies that the first instalment of €150,000 is to be treated as an overpayment of tax and therefore will be offset against the CT liability of €150,000 for the accounting period ending 31 December 2024. For preliminary tax purposes this amount is taken into account when determining the amount of preliminary tax due for the subsequent accounting period. Therefore, no additional preliminary tax will be due for accounting period ending 31 December 2025 (based on 100% of prior year's CT liability).

If the company opted for the first instalment to be paid, then the amount of preliminary tax due for accounting period end 31 December 2025 would be €150,000.

2.5 Limit on the amount of payable credits²⁶

This section only applies in respect of claims for the R&D tax credit made under section 766 or section 766A.

Finance Act 2022 amended this provision such that the limitation on the amount of payable R&D tax credit, as set out below, will not apply in respect of claims made in returns with a specified return date on or after 23 September 2023²⁷. In general, this means that the limitation will not apply in respect of accounting periods ending 31 December 2022 or later.

The aggregate amount of payable credits in respect of R&D expenditure in an accounting period ending before 31 December 2022 is subject to a limit that is the greater of—

- (i) the aggregate amount of CT paid by the company for accounting periods ending in the ten years prior to the year preceding the accounting period concerned, reduced by any amounts of payable R&D tax credit claimed in respect of prior periods, OR
- (ii) the aggregate of payroll liabilities for the period concerned and the preceding accounting period (Payroll liabilities include amounts due to Revenue in respect of PAYE, PRSI and USC) reduced by the lesser of:
 - a. any excess of aggregate payable R&D tax credit over aggregate payroll liabilities for all periods in respect of which a payable credit was claimed prior to the period in question; OR
 - b. the payroll liabilities for the preceding period.

This latter provision, (ii) above, applies to accounting periods commencing on or after 22 June 2011.

Example no. 11:

In the accounting period ended 31 December 2014, ABC Ltd incurred €500,000 of qualifying R&D expenditure. The company had payroll liabilities in both 2013 and 2014 of €50,000. This is the company's first claim to a payable R&D credit.

R&D Tax credit: €500,000 @ 25%	€125,000
Aggregate CT paid for the period 2004-2013	0
Aggregate Payroll Liability for 2013/2014	€100,000
Payroll Liability 2013	€ 50,000
Excess of prior period Payable R&D tax credit over Payroll Liability	NIL
Reduction to aggregate payroll limit for 2013/2014 (Lesser of Nil or €50,000)	NIL
Adjusted Payroll Liability Limit	€100,000
Maximum repayable for 2014 (Greater of aggregate CT or payroll)	€100,000
Carry forward of R&D tax credit	€25,000

²⁶ Section 766B(3) TCA 1997.

²⁷ Section 766B(4) TCA 1997

Example no. 12:

In the accounting period ended 31 December 2015, XYZ Ltd incurred €600,000 of qualifying expenditure. The company had aggregate payroll liabilities in 2014 and 2015 amounting to €50,000. This is the company's first claim to a payable R&D credit.

R&D Tax credit: €600,000 @ 25%	€150,000
Payroll taxes 2014/2015	€50,000
or, CT paid for the period 2005-2014	€60,000
Maximum repayable credit for 2015	€60,000
Carry forward of R&D tax credit	€90,000

Example no. 13:

LMN Ltd commenced trading in 2015.

	2015	2016	2017	2018	2019
CT Paid	€2,500	nil	nil	nil	nil
Payroll liabilities	nil	€500	€1,200	€900	€700
R&D credit	nil	nil	€5,000	€3,000	€2,000
Payable credit	N/A	nil	€2,500	€900	€700

Note: For 2017, the CT limit is €2,500 (i.e. aggregate of previous 10 years' CT liability). This is higher than two years' payroll liability €1,700 (i.e. 2016 and 2017 payroll liabilities). Therefore, the maximum amount that can be claimed as a payable credit is €2,500 in 2017.

For 2018 and 2019, the CT limit is €0 as LMN Ltd utilised the CT limit in 2017 (i.e. €2,500 - €2,500).

For 2018, the payroll liability limit of €2,100 (€1,200 + €900) is reduced by the lesser of either €2,100 or the payroll liability for the first year of the two-year period (€1,200). Therefore, the maximum that can be claimed as a payable credit is €900.

For 2019, the payroll liability limit is €1,600 (€900 + €700) is reduced by the lesser of either €1,600 or the payroll liability for the first year of the two-year period (€900). Therefore, the maximum that can be claimed as a payable credit is €700.

Example no. 14:

QVR Limited commenced trading in 2015. The company has been continually loss-making.

	2015	2016	2017	2018	2019
CT liability	nil	nil	nil	nil	nil
Payroll liability	nil	€500	€400	€800	€600
R&D credit	nil	€2,000	€3,000	€1,000	€2,000
Payable credit	nil	€500	€400	€800	€600

Note:

For 2016, the payable credit limit is based on the payroll liabilities as there is no CT paid in the previous 10 years and no payroll liabilities in previous periods. Therefore, the payable credit is €500.

For 2017, the payable credit limit is calculated as follows: €900 (€500 + €400), reduced by the lesser of €500 (the previous year's payroll liabilities). Therefore, the payable credit is €400.

For 2018, the payable credit limit is calculated as follows: €1,200 (€800 + €400), reduced by €400 (the previous year's payroll liabilities). Therefore, the payable credit is €800.

For 2019, the payable credit limit is calculated as follows: €1,400 (€600 + €800), reduced by €800 (the previous year's payroll liabilities). Therefore, the payable credit is €600.

Example no. 15:

A company claims an R&D tax credit of €100,000 for 2015.

No CT has been paid in the relevant 10-year period. The payroll liabilities for 2015 are €50,000. Therefore, the aggregate of the 3 instalments cannot exceed €50,000.

The 1st instalment is €33,000 (i.e. €100,000 * 33%).

The 2nd instalment is €17,000. It is restricted from €33,500 (i.e. (€100,000 - €33,000) * 50%) as the aggregate amount cannot exceed the payroll liabilities of €50,000.

As the payroll restriction under section 766B(3)(b) has been reached there is no 3rd instalment; instead the remaining excess is available for carry forward to be set against CT for future accounting periods.

2.6 How to treat grants received²⁸

Any expenditure which is met directly or indirectly by any grant aid or assistance from

- the State, or
- a relevant Member State of the EU, EEA, or the UK, or
- any board established by statute, or
- any public or local authority or any other agency of the State, or of another relevant Member State of the EU, EEA, or the UK, or
- an institution, office, agency or other body of the European Union, or
- a state, other than the State or a Member State, and any board, authority, institution, office, agency or other body in such state

will not qualify for relief.

Any monies received from the Temporary Wage Subsidy Scheme (TWSS), the Employment Wage Subsidy Scheme (EWSS) and the Temporary Business Energy Support Scheme (TBESS) are considered assistance from the State and therefore expenditure met from such assistance will not qualify for relief.

²⁸Section 766(1)(b)(v) TCA 1997 This section was amended by section 25(2)(a)(ii) to extend this definition to ensure grant funding from the European Commission and institutions of the Commission, and from non-European member states or bodies of such a state, is deducted from the qualifying expenditure on research and development activities.

Example no. 16:

PQ Ltd. incurred qualifying R&D expenditure of €500,000 and the company is entitled to a State grant of €70,000 in respect of R&D expenditure incurred in the accounting period ended 31 December 2023. For 2024, PQ Ltd incurred the same amount of expenditure on qualifying R&D and was also entitled to a State grant of €70,000 in respect of the R&D expenditure incurred.

The R&D tax credit for 2023 and 2024 is calculated as follows:

	31 December 2023	31 December 2024
Expenditure in the relevant period	€500,000	€500,000
Less grant	<u>(€70,000)</u>	<u>(€70,000)</u>
Qualifying Expenditure	€430,000	€430,000
Corporation Tax Credit Calculation (note 1)	<u>€107,500</u>	<u>€129,000</u>

Note 1:

The R&D corporation tax credit for the accounting period ended 31 December 2023 is calculated at the 25% rate. The R&D corporation tax credit for the accounting period ended 31 December 2024 is calculated at the 30% rate.

Note 2:

A claim for the R&D corporation tax credit must be made within 12 months from the end of the accounting period in which the expenditure was incurred.

2.7 The Science Test in micro or small enterprises which are supported by R&D grants

The process of examining an R&D credit claim may be considered by reference to two criteria:

- The Science Test: that the activities under review are consistent with the statutory definition of research and development activities.
- The Accounting Test: that the expenditure claimed as being laid out on qualifying research and development activities is correctly so claimed.

2.7.1 Interaction with IDA/Enterprise Ireland's/Horizon 2020/Horizon Europe R&D grants

Enterprise Ireland's, Horizon 2020, Horizon Europe and IDA's R&D grants in respect of research and experimental development projects come within the meaning of the OECD's Frascati Manual, which states: "Research and experimental development comprise creative and systematic work undertaken in order to increase the stock of knowledge – including knowledge of humankind, culture and society – and to devise new applications of available knowledge". While there are differences to the definition of R&D for both the grants and the R&D credit, it is considered that the two definitions are very close. Therefore, with a view to minimising the burden of engaging experts to verify the science test in R&D credit claims, it has been decided that Revenue would not, as a rule, seek to challenge the science test in relation to a project where:

- an Enterprise Ireland, Horizon 2020, Horizon Europe or IDA R&D grant has been approved in respect of the R&D project;
- the project is undertaken in a prescribed field of science or technology, as defined in regulations (S.I. No. 434 of 2004);
- the company is a micro or small enterprise within the meaning of the Annex to Commission Recommendation 2003/361/EC of 6 May 2003 concerning the definition of micro, small and medium-sized enterprises²⁹; and
- the total R&D credit claimed by the company for an accounting period (of not less than 12 months) is €50,000 or less.

2.7.2 Limits to Practice

This treatment applies only to R&D grants and not any other grant, whether used for R&D or otherwise.

²⁹ [OJ No. L124, 20.5.2003, P.36](#)

2.8 Time limit on claims and time frames for payment of credits³⁰

Any claim for the R&D tax credit under section 766 or the R&D corporation tax credit under section 766C must be made within 12 months of the end of the accounting period in which the expenditure on R&D giving rise to the claim is incurred. Similarly, claims made under section 766A or section 766D in respect of expenditure on buildings and structures to be used for R&D must be made within 12 months from the end of the accounting period in which the relevant expenditure was incurred.

2.8.1 Time frame for payment of the R&D tax credit under section 766 and section 766A

Any claim to offset unused credits against the CT liability of the preceding accounting period and/or to have any excess paid by Revenue in three instalments (as set out in [section 2.4.1](#) above) may be made by completing the relevant section of the Form CT1. The three instalments of the excess can be paid not earlier than the 21st day of the 9th month following the end of the relevant period (first instalment), and 12 months (second instalment) and 24 months (third instalment) respectively following that date.

While the claim for payment of the excess must be made within the one-year limit mentioned above, the subsequent instalments are not separately subject to this time limit. In the absence of a claim for payment, the excess will be carried forward for offset against the company's CT liability in the subsequent accounting period.

Where a claim for acceleration of the second and/or last instalments is made as set out in [section 2.3.2](#)³¹, the claim can be made notwithstanding the references to the 12- and 24-month time periods mentioned above in respect of such instalments.

Note however, if a claim in respect of any given period is not made within the requisite 12-month period, then no entitlement to any amount in respect of that period arises at any time.

For accounting periods commencing on or after 1 January 2023, claims for the R&D corporation tax credit can only be made under section 766C and/or section 766D.

2.8.2 Time frame for payment of the R&D corporation tax credit under section 766C and section 766D

Where a claim for the R&D corporation tax credit has been made under section 766C or section 766D, Revenue will, on receipt of a valid claim for each of the three instalments during a 48-month period, pay or offset the credit in a manner specified by the company.³²

³⁰ Section 766(5), Section 766A(5), Section 766C(9), Section 766C(11), Section 766D(8), Section 766D(10) TCA 1997.

³¹ In accordance with section 766(4D) and section 766A(4C), TCA 1997

³² Section 766C(11) and section 766D(10) TCA 1997

Claims for the R&D corporation tax credit must be made in the return that the company is required to file, as set out in [section 8.6](#), and must be made within 12 months of the end of the accounting period in which the expenditure on R&D giving rise to the claim is incurred.

For claims made under both section 766C and section 766D, the first instalment will become available for payment or offset on the filing of this return where a valid claim is made.

Where a company submits a claim for the second and last instalment for a 12-month accounting period, the second and third instalment is available for payment or offset on the date of the filing of a valid claim in the tax return for that accounting period.

Where a company submits a valid claim in a tax return for an accounting period, the duration of which is for any other period, for example a short accounting period of less than 12 months, the following applies:

- The second instalment is available for payment or offset not earlier than 12-months after the CT pay and file date for the accounting period in which the R&D expenditure was incurred.
- The third instalment is available for payment or offset not earlier than 24-months after the CT pay and file date for the accounting period in which the R&D expenditure was incurred.

Example no. 17:

A Ltd has a 12-month accounting period ending 31 December.

The company claimed the R&D corporation tax credit in respect of the accounting period ending 31 December 2023 on the filing of its Form CT1 on 23 March 2024. Subsequently for the accounting periods ended 31 December 2024 and 31 December 2025, the company claimed the R&D corporation tax credit on the filing of its Form CT1 on 23 March 2025 and 23 March 2026 respectively.

The R&D corporation tax credit is payable to A Ltd as follows:

Instalments	Date credit is payable
1 st Instalment	23 March 2024
2 nd Instalment	23 March 2025
3 rd Instalment	23 March 2026

Example no. 18:

B Ltd has historically prepared its accounts to 31 December. The company claimed the R&D corporation tax credit in respect of the accounting period ending 31 December 2023 on the filing of its Form CT1 on 23 March 2024.

B Ltd changed the period to which it prepares its accounts in 2024 resulting in a shorter accounting period ending 30 November 2024. It claimed the R&D corporation tax credit in respect of the accounting period ending 30 November 2024 on the filing of its Form CT1 on 23 July 2025. B Ltd's subsequent accounting period was for 12-months ending 30 November 2025. It claimed the R&D corporation tax credit for the accounting period ending 30 November 2025 on the filing of its Form CT1 on 23 March 2026.

The R&D corporation tax credit is payable to B Ltd as follows:

Instalments	Date credit is payable
1 st Instalment	23 March 2024
2 nd Instalment	23 September 2025
3 rd Instalment	23 September 2026

2.9 Order of Offsets³³

This section only applies in respect of claims for the R&D tax credit made under section 766 or section 766A. For accounting periods commencing on or after 1 January 2023, claims for the R&D corporation tax credit can only be made under section 766C and/or section 766D.

Credits arising from the relevant period (i.e. the year of assessment in which expenditure is incurred) must be claimed first. If there are remaining credits from the relevant period, the company can carry back these credits to the previous accounting period. If credits still remain, the company can elect to either carry the credits forward, or to receive a payable credit. This order of offsets applies equally to group expenditure (see [section 7](#) for further details on group claims).

³³ Refer to [TDM Part 15-02a-06](#) for more details on order of offsets of reliefs, allowances and deductions.

Example no. 19:

Company RST Limited makes a claim for an R&D tax credit due for the accounting period ending 31/12/21 in respect of expenditure incurred on or after 1 January 2021. The tax credit is in the amount of €9,000,000.

Unused credit carried forward from 31/12/20	€4,000,000
CT liability for accounting period ending 31/12/21	€10,000,000
Less current year R&D tax credit	(€9,000,000)
Balance of liability	€1,000,000
Less unused R&D tax credit from 2020	(€1,000,000)
CT Liability	Nil

Note: The R&D tax credit in respect of expenditure incurred in 2021 is offset prior to any excess carried forward. The balance from 2020 is €3,000,000 (€4,000,000 - €1,000,000) and will be carried forward to be set against the CT liability for the succeeding relevant period.

Example no. 20:

In the 12 months ended 31 December 2021, QPS Ltd incurred €2,000,000 qualifying R&D expenditure. It has outstanding instalments of payable credit in respect of the periods 2021 (3rd instalment of €100,000) and 2020 (2nd instalment of €200,000) and an amount of non-payable R&D tax credit carried forward from a period prior to 2008.

The R&D tax credit may be applied as follows:

CT Liability for 2021	€800,000
Less R&D tax credit for 2021 (€2m x 25%)	(€500,000)
Pre 2008 Credit carried forward	(€300,000)
CT Liability Due	Nil
Payable R&D tax credit Due (2 nd and 3 rd instalments)	€300,000

3. Qualifying Research and Development Activities³⁴

Qualifying R&D activities must satisfy all of the following conditions. They must be:

Systematic, investigative or experimental activities, in a field of science or technology, encompassing one or more of the following categories of R&D:

- a. Basic research,
- b. Applied research,
- c. Experimental development.

In addition, they must seek to achieve scientific or technological advancement, and involve the resolution of scientific or technological uncertainty.

3.1 Systematic, Investigative or Experimental Activities

- It is expected that activities will be undertaken in a planned logical sequence – generally to a recognised methodology – with detailed records being maintained. It is important that the claimant is able to provide records and details of the activities carried on, not just the outcomes. It is necessary for companies to document and be in a position to present evidence of qualifying activities, including dated documents of the original scientific or technological goals of the activity; the progress of the work; how it was carried out, and any conclusions arrived at.
- Each project should be documented showing clearly why each major element is required and how it fits into the research activity as a whole. To build on the results of testing undertaken in a systematic way requires the organised documentation of work undertaken by way of experimentation or investigation.
- Relevant measures should be used to determine if the scientific or technological properties of the R&D activity are met. Revenue expects to see documentation that charts the lifetime of the project from start to finish. Within these records there should be reference to milestones achieved. Where a particular path has not been successful and a different path required, then documentation to support these decisions should be available if needed.
- It is important that claimants realise the importance of **contemporaneous** and **relevant** documentation to support the claim. Failure to keep such documentation may result in the claim for the R&D tax credit or the R&D corporation tax credit being disallowed. In circumstances where a particular project within the claim fails to meet the requirement to have sufficient appropriate documentation available, but there are

³⁴ Section 766(1)(a) TCA 1997 – in the definition of “research and development activities”.

no concerns about the quality or lack of documentation for the rest of the claim, Revenue will only disallow that portion of the claim with insufficient documentation.

3.2 Field of Science & Technology

The categories of activities that qualify for relief are set out in S.I. No. 434 of 2004, TCA 1997 (Prescribed Research and Development Activities) Regulations 2004. The categories are:

1. Natural Sciences
2. Engineering and Technology
3. Medical Sciences
4. Agricultural Sciences

The regulations list further sub-categories for each of the above. Further details are contained in [Appendix 1](#). Note in particular that Social Science Activities are excluded from the list. Excluded activities are set out in [Appendix 2](#).

3.3 Types of Research³⁵

Basic Research means “experimental or theoretical work undertaken primarily to acquire new scientific or technical knowledge without a specific practical application in view”.

Applied Research means “work undertaken in order to gain scientific or technical knowledge and directed towards a specific practical application”. Applied research is usually undertaken either to determine possible uses for the findings of basic research or to determine new methods or ways of creating practical applications.

Experimental Development means “work undertaken which draws on scientific or technical knowledge or practical experience for the purpose of achieving technological advancement and which is directed at producing new, or improving existing, materials, products, devices, processes, systems or services including incremental improvements thereto”.

3.4 Scientific or Technological Advancement

An advance in science or technology means an advance in the overall knowledge or capability in the field of science or technology (**not an advance in the company’s own state of knowledge or capability alone**).

The test relates to knowledge or capability reasonably available to the company or a competent professional working in the field. Where knowledge of an advance in science or technology is not reasonably available, e.g. where it has not been published; is not in the public domain; or it is a trade secret of a competitor, companies may not be disqualified

³⁵ Section 766(1)(a) TCA 1997 – in the definition of “research and development activities”.

from claiming the credit where they undertake activities seeking to independently achieve the same scientific or technological advancement.

Reasonably available scientific or technical knowledge or experience includes information that is reasonably available to a company from both internal and external sources.

A scientific or technological uncertainty may be addressed by one company, or a number of companies may be working to resolve the same scientific or technological uncertainty at the same time.

If the solution to a scientific or technological uncertainty is reasonably available to a competent professional working in the field, lack of knowledge by a company due to a lack of diligence in seeking that solution or lack of appropriate expertise within the company does not constitute scientific or technological uncertainty.

3.5 Scientific or Technological Uncertainty

This arises in two situations, viz.

- a. Uncertainty as to whether a particular goal can be achieved, or
- b. Uncertainty (from a scientific or technological perspective) in relation to alternative methods that will meet desired specifications such as cost, reliability or reproducibility.

If, on the basis of reasonably available scientific or technological knowledge or experience, such technological or scientific uncertainty exists, R&D activity would aim to remove that uncertainty through systematic, investigative or experimental activity.

Uncertainty as to whether new materials, products, devices, processes, systems or services will be commercially viable is **not** scientific or technological uncertainty. In commercial settings, however, a reasonable cost target is always an objective, and attempting to achieve a particular cost target can require the resolution of a scientific or technological uncertainty. Cost targets may require that scientifically or technologically uncertain alternative approaches, configurations etc. have to be attempted although more costly alternatives exist. **A scientific or technological advance will always involve the resolution of uncertainty.**

3.6 New materials / products / systems

Systematic, experimental or investigative activities directed at developing new or improved materials, products, devices, processes or services **may** qualify for the R&D credit provided the activities seek to achieve the goals set out above. However, a process, material, device, product, service or system does not become an advance in science or technology simply because science or technology is used in its creation. In many cases these projects may be innovative³⁶ rather than qualifying R&D.

Work which uses science or technology, but which does not advance scientific or technological capability or knowledge as a whole, is not an advance in science or technology. Normal technology transfer or making improvements to materials, products, devices, processes, systems or services through the purchase of rights or licence, or through the application of known principles or knowledge, would not represent scientific or technological advancement. Neither does solving technical problems or troubleshooting using generally available scientific or technological knowledge or experience meet this test. In addition, work in the development of a new or improved product will not, of itself, constitute R&D activities. The work may, for example, entail the resolution of extensive design issues but may not involve a scientific advancement.

For example, the application of established management tools such as ‘*Lean*’ process improvement systems may increase efficiencies or increase productivity, or both, but does not constitute qualifying R&D.

3.7 Software

The [OECD Frascati Manual](#) states “for software development to be classified as R&D its completion must be dependent on the development of a scientific and/or technical advance and the aim of the project must be resolution of a scientific and/or technical uncertainty on a systematic basis.”³⁷

Software developments using known methodologies in standard development environments using the standard features and functions of existing tools would **not** typically advance technology and would not address or resolve technological uncertainty. Undertaking routine analysis, copying, upgrading or adaptation of an existing product, process, service or material would not be considered to be R&D activities. Therefore, much software development does not qualify as R&D activity.

Advances are typically made through innovation in software architectures, algorithms, techniques or constructs. It is important for claimant companies to identify not only those developments that result from qualifying activity but also the phases of the software development life cycle that are qualifying activity.

While software development methodologies continue to evolve, and are often highly iterative in nature, they continue to contain certain key elements such as design, build and test.

³⁶ Refer to the definition of “innovation” in section 488 TCA 1997.

³⁷ Section 2.4.1 of the OECD Frascati Manual ‘Proposed Standard Practice for Surveys on Research and Experimental Development

3.7.1 Qualifying Activity pertaining to Software

Systematic: Qualifying activity must be systematic in nature as well as achieving advances.

Agile development methodologies such as **Scrum** and similar techniques, while not exhibiting the linear nature of a traditional software life cycle, are systematic in nature.

Advances and Resolution of Uncertainty: Software development is no different from any other industry in that it is essential that claimant companies keep aware of developments in their field to ensure that activity for which the credit is claimed is directed at genuine advances. Subject to that caveat, scientific or technological uncertainty may arise at various points throughout a development life cycle including:

- Development of mathematical models or algorithms to achieve a desired functionality goal(s);
- Translating such models or algorithms into code and ensuring that the desired goal(s) can be achieved;
- Ensuring that the application/process/tool developed will continue to function in different scale environments;
- Ensuring that the application/process/tool developed will function across a range of platforms;
- Ensuring that the application/process/tool developed will integrate as intended with other applications/systems.

Within a typical software development cycle, there will be also be features that do not constitute qualifying R&D activity such as:

- User acceptance testing designed to satisfy users as to the accuracy and completeness of the product rather than to test feasibility or capacity;
- Development work aimed at packaging a product for market where no scientific or technological uncertainty exists; or
- Inclusion of features or functionality where no scientific or technological uncertainty exists.

In large scale projects using formal project governance methodologies, each phase in a project life cycle will have clear deliverables and associated resource assignments and therefore the tracking of qualifying expenditure should be a relatively straightforward exercise.

Smaller scale projects, although requiring appropriately defined project deliverables and expenditure tracking protocols, may have less formal governance methodologies in place. In these circumstances, claimants must ensure that for those elements for which R&D credit is claimed, the qualifying element is properly recorded.

In agile development methodologies, qualifying and non-qualifying activity may take place simultaneously in a manner that makes them more difficult to separate. In these circumstances, project managers should apportion the staffing and other costs associated with each element of a development in a manner that appropriately reflects the balance of effort expended on qualifying and non-qualifying activity.

3.8 Success or Failure of R&D Activity³⁸

The Act requires that the activity must **seek to achieve** (as opposed to succeed in achieving) **scientific or technological advancement**. Even if the advance in science or technology sought by a project is not achieved or not fully realised, R&D may still take place.

For example, a particular R&D activity may cease or radically change if the advance originally sought becomes available from a scientific journal or newly published patent. This does not undermine the validity of the activity from the perspective of this test. Equally, determining that a hypothesis is incorrect may advance scientific knowledge.

Similarly, in experimental development, discovering that a certain technological alternative does not work can advance the technological knowledge base. Such a result would not, of itself, preclude a valid claim being made for R&D credit.

Where an R&D activity is shown to be systematic, investigative, or experimental and is undertaken to resolve a clearly defined scientific or technological uncertainty, the requirements of attempting to achieve scientific or technological advancement will generally be met.

Work carried out in incremental stages, the aim of which is the achievement of scientific or technological advancement, and which involves resolution of scientific or technological uncertainty, will qualify as R&D activity.

³⁸ Section 766(1)(a) TCA 1997 – in the definition of “research and development activities”

4. Qualifying Expenditure³⁹

4.1 Activities undertaken by the claimant company

The R&D credit is available in respect of expenditure incurred wholly and exclusively—

1. **in the carrying on**
2. **by it (the company)**

of qualifying R&D activities.

The phrase “in the carrying on” must be distinguished from “for the purposes of” or “in connection with” used elsewhere in the Act. Additionally, it should not be confused with expenditure incurred to enable a company to carry on R&D. The phrase “in the carrying on” is narrower in scope.

Costs which are **not** wholly and exclusively incurred **in the carrying on** of the R&D activity, including indirect overheads such as recruitment fees, insurance, travel, equipment repairs or maintenance, shipping, business entertainment, telephone, bank charges and interest, **do not qualify** as relevant expenditure.

Overheads which are wholly and exclusively incurred directly in the carrying on of the qualifying R&D activity, for example power consumed in the R&D process, qualify for the R&D credit.

From 1 January 2020, capital expenditure on scientific research which qualifies for an allowance under section 765 TCA 1997, is no longer relevant expenditure on R&D.

4.2 Rental Costs

In many cases, expenditure incurred on renting a space or facility, which is used by a company to carry on an R&D activity, may be expenditure that is incurred “for the purposes of”, or “in connection with”, the R&D activity but will not constitute expenditure incurred wholly and exclusively in **the carrying on** of the R&D activity. The eligibility of rental expenditure incurred by a company will relate to the extent to which it is incurred wholly and exclusively **in the carrying on** of the R&D activities.

Where the nature of the rented space or facility is such that it is integral to the carrying on of the R&D activity itself, it is likely that the rent can be shown to be more than merely “for the purposes of” or “in connection with” the R&D activity.

³⁹ Section 766(1)(a) TCA 1997 – in the definition of “expenditure on research and development” Amended by section 25(2)(a)(i)(l) so that, from 1/1/2020, capital expenditure on scientific research which qualifies for an allowance under Section 765 TCA 1997, is no longer relevant expenditure on a building or structure.

Where a company rents a specialised laboratory or a clean room in order to advance its R&D, the question to ask is whether or not the company could have undertaken the R&D activity without the **specialised nature** of the laboratory or clean room. If the activity could not have been carried out, then the specialised nature of the rented space can be said to be integral to the R&D activity the company is carrying on and, to the extent that the expenditure is **wholly and exclusively incurred in the carrying on** of the R&D activity, rent may be **qualifying** expenditure.

In contrast, a company who rents an office space in which it carries on its R&D activities is unlikely to be able to demonstrate that there is anything specialised in the nature of the space that is integral to the R&D activities. While the company may require a space to house the R&D team, this requirement does not mean that the space is integral to the R&D activity. An office space is the setting in which R&D happens and does not itself perform a key function in relation to the R&D process; it is not integral to the R&D activity.

Where a company undertakes qualifying R&D activities on the manufacturing process, it is unlikely to be eligible to claim rent on the manufacturing facility as expenditure on R&D activities. While the R&D activities may not be undertaken away from the facility, the rent is **not** incurred **wholly and exclusively in the carrying on** of those R&D activities.

The following material is either exempt from or not required to be published under the Freedom of Information Act 2014.

[...]

4.3 Employee / Staff Costs

The eligibility of the cost of rewarding individuals will relate to the extent of their deployment to, and actual engagement in, qualifying R&D activities. In practice, this means that where an employee spends an identified proportion of their time “in the carrying on” of qualifying activity, then that same proportion of their emoluments may be considered to be qualifying expenditure.

The term ‘emoluments’ may be taken to include pension contributions, bonus payments, health insurance or other items included in the reward package paid to R&D employees⁴⁰. Emoluments also include holiday entitlement, public holidays etc. All expenses borne by the company in relation to the employment contract of the staff member which are operated through the PAYE/PREM payroll system should be considered to be emoluments, and apportioned.

Note that overheads associated with the employment of an individual e.g. HR costs, payroll team costs, canteen costs or similar are not considered to be eligible as these costs, while

⁴⁰ Note that in the case of proprietary directors or other persons with the capacity to directly control their own emoluments, payments to such controlling persons which are significantly out of step with the normal emolument practice of the company will generally not be regarded as eligible expenditure.

they may be incurred in connection with the qualifying activity, are not incurred **in the carrying on by it** of the activity.

- **Pension Costs**

If pension is a contracted part of the employees' emolument, that proportion of the pension costs which corresponds with the time spent on qualifying R&D is allowable.

- **Bonus Payments**

If an employee is working on qualifying R&D, that proportion of the bonus which corresponds with the time spent on qualifying R&D is allowable.

- **Health Insurance and other forms of emolument**

Similarly, where an employee is directly working on qualifying R&D, a proportion of any other emoluments corresponding to the amount of time spent on qualifying R&D is allowable. Note that benefits will not be allowable if they are paid by the company but not ultimately borne by the company.

Example no. 21:

60% of an employee's time is spent carrying out qualifying R&D. The employee's salary is €80,000.

Cost of employee salary	€80,000
Employer contributions (Pension, PRSI etc.)	€15,000
Health Insurance costs (for employee and spouse and/or children)	<u>€2,000</u>
Total cost of employment:	<u>€97,000</u>
Allowable costs for R&D credit (60% of €97,000)	€58,200

4.4 Agency staff

The use of agency staff is considered to be outsourcing for the purposes of computing the amount of qualifying activity and the related expenditure is, therefore, subject to the limitations on outsourcing set out in [Section 6](#). This relates to any individual not remunerated directly by the company for their services.

4.4.1 Individual consultants

Costs incurred related to individual consultants who are hired on a part-time or short-term basis to undertake sub-contracted activity can be treated as part of the direct employee costs of the company and not as agency staff provided the following conditions are met:

- The individual works under the company's control and direction.
- The individual works on the company's premises.
- The individual must be able to contribute specialist knowledge, which cannot be supplied by the in-house research team, to a specific R&D project being undertaken by this in-house team.

- The engagement period does not exceed 6 months.

4.5 Employee Secondment

Where an individual is seconded to a company undertaking R&D activities, and the costs of that person's employment are borne by the company undertaking the R&D activities, they will be treated as direct employee costs, provided the following conditions are met:

- The individual undertakes their duties in Ireland, and
- The individual must contribute specialist knowledge to a specific R&D project being undertaken by the in-house team.

4.6 Royalty Payments⁴¹

Expenditure on R&D shall not include a royalty, or any other sum paid by a company to a connected person⁴² and which is, in the hands of the recipient, income from a qualifying asset for the purposes of the Knowledge Development Box (within the meaning of section 769G of the Act).

Royalty payments or other payments for the use of intellectual property not subject to the above exclusion may qualify provided they are incurred wholly and exclusively in the carrying on of qualifying R&D activities.

4.7 Cloud Computing Costs

Costs incurred by a company on cloud computing are allowable costs for the purposes of qualifying R&D expenditure where those costs are incurred, and to the extent that they are incurred, wholly and exclusively in the carrying on by the company of qualifying R&D activities.

4.8 Pre-Trading Expenditure⁴³

4.8.1 Pre-trading expenditure under section 766

For the purposes of an R&D tax credit claim under section 766, where expenditure has been incurred by a company in the carrying on of R&D activities before the company commenced to trade, a claim in respect of that expenditure must be made within 12 months from the end of the accounting period beginning at the date the company first carried on a trade. The amount of the R&D tax credit due is the amount which the company would have been entitled to claim if it had been trading when the expenditure was incurred.

⁴¹ Section 766(1)(a) TCA 1997, paragraph (iii) in the definition of "expenditure on research and development"

⁴² A connected person is generally a person (including a company) who can exercise control over the company as set out in section 10 TCA 1997

⁴³ Section 766(1)(b)(iv) TCA 1997

That amount may then be carried forward and used against the CT liability of the company in future periods.

For accounting periods commencing on or after 1 January 2023, claims for the R&D corporation tax credit can only be made under section 766C.

4.8.2 Pre-trading expenditure under section 766C

For the purposes of an R&D corporation tax credit claim under section 766C, pre-trading expenditure incurred by a company in the carrying on of R&D activities can be claimed as a payable tax credit and will be refundable in three annual instalments from the first accounting period in which the company commences to trade.

Example no. 22

C Limited, before commencing to trade, carried on pre-trading R&D activities in respect of the accounting periods ended 31 December 2020, 31 December 2021 and 31 December 2022. The company commenced to trade on 1 January 2023. The R&D expenditure incurred by the company is as follows:

Accounting period ended 31 December 2020	€50,000
Accounting period ended 31 December 2021	€25,000
Accounting period ended 31 December 2022	<u>€75,000</u>
Total pre-trading R&D expenditure	€150,000
Accounting period ended 31 December 2023	€90,000

As the company first begins to trade in the accounting period ended 31 December 2023, the R&D corporation tax credit claim shall be made under section 766C.

The total R&D corporation tax credit claimed by the company is €60,000 (i.e. €150,000 + €90,000 = €240,000 x 25%).

The first instalment will equal the greater of €25,000 (or the credit claimed if lower), or 50% of the amount of the credit claimed. Therefore, the first instalment due is €30,000.

C Limited **must specify**, on the Form CT1, in respect of the first instalment, whether the amount of the first instalment, or any portion of the amount, is to be –

- (a) treated as an overpayment of tax (for the purposes of section 960H)
- (b) paid to the company by Revenue.

Note: For accounting periods commencing on or after 1 January 2024, the R&D corporation tax credit rate is 30%. The first instalment available will be the greater of €50,000 (or the credit claimed if lower), or 50% of the amount of the credit claimed.

4.9 Materials used in R&D Activities which may be subsequently sold⁴⁴

Materials used in qualifying R&D activities may be of further commercial value after their research use has concluded. In such cases, it must be determined if those materials were utilised wholly and exclusively in the carrying on by the company of qualifying R&D activities.

Where it is reasonable to consider that there will be a saleable product, the lower of cost or net realisable value of any materials or other saleable product which remain after the R&D activity, should be deducted from the expenditure claimed.

Example no. 23:

Company A incurred expenditure on process R&D activities in the accounting period ended 31 December 2024 of €100,000.

The €100,000 includes the cost associated with running 1,000 items, costing €5 each, through the process. Based on the type of process R&D undertaken, it is reasonable to consider that the company knew the items would be saleable having passed through the process.

3 batches of 10 were retained for further research and could not be sold, while the remaining 970 items are available for sale. The cost of the 970 items sold was therefore not incurred wholly and exclusively in the carrying on of R&D activities.

The allowable expenditure for qualifying R&D activities is €150 (i.e. 3 x 10 x €5) and the remainder, €4,850 (i.e. 970 x €5), should be deducted from the R&D expenditure to get the qualifying R&D expenditure.

Total R&D expenditure	€100,000
Deduct: Batch for resale	<u>(€4,850)</u>
Qualifying R&D expenditure	€95,150

⁴⁴Section 766(1)(a) TCA 1997 – in the definition of “expenditure on research and development”

Example no. 24:

Biopharma Ltd is carrying out research into a new drug. Phase 2 trials were successfully completed. It incurred expenditure on R&D activities on Phase 3 trials in the accounting period ended 31 December 2024 of €5,000,000. The cost of the R&D activities includes the costs of the raw materials used in manufacturing the 3 full scale batches, as well as those involved in a number of unsuccessful attempts to scale production up to manufacturing scale.

Due to the nature of biopharma products, at the time of producing these batches there is a scientific uncertainty as to the viability of scaling and manufacturing the product and there is a scientific uncertainty if the product will maintain its specific compound and not deteriorate, in the test environment. Therefore, it would not be reasonable to consider at the time of carrying out the Phase 3 trials that the company will be able to sell the drugs, once approved by the relevant regulatory body.

The company has assessed that some aspects of the process are not “qualifying R&D” for the R&D tax credit.

The cost relating to those non-qualifying elements is €300,000, this will not be included in the R&D tax credit claim. Where the expenditure is incurred wholly and exclusively in the carrying on of R&D activities the cost is allowable as qualifying R&D.

Therefore, the calculation for expenditure on qualifying R&D activities as follows:

Total R&D expenditure	€5,000,000
Deduct: Non – qualifying R&D costs	<u>(€300,000)</u>
Qualifying R&D expenditure	€4,700,000

Example no. 25:

Generic Pharma Ltd incurred €500,000 on carrying out Phase 3 trials of a generic drug. Having regard to the relatively low failure rate of Phase 3 trials in relation to drugs of this kind, and the pre-existing knowledge from its patented predecessor, it is considered that there are no scientific uncertainties being resolved. The resolution to any uncertainties in relation to scaling production, for example, are available to a competent professional working in the field. In addition, it was reasonable to consider at the time of the Phase 3 trial that the 3 batches would be saleable, and any costs associated with manufacturing those batches. No R&D credit may be claimed by Generic Pharma Ltd in this case.

4.10 R&D carried on as part of an Existing Trade

Expenditure which is incurred on qualifying R&D which is carried on as part of the trade activities of a company may qualify for the R&D credit. In these circumstances, the eligible expenditure is limited to additional expenditure that is incurred wholly and exclusively in the carrying on of the qualifying activity.

For example, where a company carries out qualifying R&D activity on a live production line while continuing to produce saleable product on the same line, costs such as increased

unsaleable product and additional time costs which can be shown to have been incurred in the carrying on of the qualifying R&D activity may be eligible expenditure for the purposes of the R&D credit.

5. Capital Expenditure

5.1 Buildings and Structures used for Research & Development⁴⁵

Expenditure on the construction or refurbishment of a building for use for qualifying R&D activity, which does not qualify for an allowance under section 765, may qualify for an R&D tax credit under section 766A or an R&D corporation tax credit under section 766D of the Act where such a building also qualifies for industrial buildings capital allowances (See Part 9 of the Act). The R&D tax credit or R&D corporation tax credit is in addition to any capital allowances claimed. The credit is available for new expenditure on the construction, including refurbishment, of a building or structure where the R&D activities carried on by a company in that building or structure over a period of four years (referred to as the “specified relevant period”) represents at least 35% of all activities carried on in the building or structure.

Where, due only to the Covid-19 pandemic, a company is not in a position to meet the ‘specified relevant period’ requirement for the year 2020, the specified period may be extended to a five-year period. The requirement for R&D activities to represent at least 35% of all activities carried on in the building or structure over a four-year period may exclude the year 2020 and the company can meet the requirement in the year commencing on the day after the ‘specified relevant period’ ends.

Qualifying expenditure on the construction or refurbishment of a qualifying building may be treated as having been incurred either:

- (i) on the date it was actually incurred, or
- (ii) on the date the building was first brought into use for the purposes of a trade, or the refurbishment is completed, as appropriate.

Expenditure may be incurred on the construction or refurbishment of a building which spans two or more accounting periods. Where this occurs, the aggregate expenditure may be treated as having been incurred on the date that it was actually incurred, or on the date the building is first brought into use. The 12-month claim period applies by reference to the date that the expenditure is treated as incurred.

The cost of acquiring the land on which the building or structure is erected does not qualify for the R&D credit.

The R&D credit is calculated by reference only to that portion of the building or structure to be used for R&D activities⁴⁶.

⁴⁵ Section 766A(1)(a) TCA 1997 amended by section 25(3)(a) so that, from 1/1/2020, capital expenditure on scientific research which qualifies for an allowance under Section 765 TCA 1997, is no longer relevant expenditure on a building or structure.

⁴⁶ Section 766A(1)(b)(iii) TCA 1997

Where a building is used for qualifying R&D and for other non-R&D purposes, for example in production, the cost of the construction or refurbishment should be apportioned on a just and reasonable basis. Records should be maintained to show the computation of any apportionment and the rationale for the use of such basis of apportionment.

If an apportionment that has already been made in this manner is later shown **not** to be “just and reasonable”, a revised apportionment must be made.

Any such expenditure which is met directly or indirectly by any grant aid or assistance from

- the State, or
- a relevant Member State of the EU, EEA, or the UK or
- any board established by statute, or
- any public or local authority or any other agency of the State, or of another relevant Member State of the EU, EEA, or the UK or
- an institution, office, agency or other body of the European Union, or
- a state, other than the State or a Member State, and any board, authority, institution, office, agency or other body in such state,

will not qualify for relief⁴⁷.

Example no. 26(a) [25% R&D tax credit rate]:

Company A incurred €1,000,000 of relevant construction expenditure in the accounting period ended 31 December 2021.

The qualifying R&D activities to be carried on by the company in that building over the specified relevant period (four years from the date of first use in 2021) represents 40% of all activities carried on. The R&D tax credit under section 766A is calculated as follows:

Specified relevant expenditure:	40% of €1,000,000 =	€400,000
Tax credit:	€400,000 @ 25% =	<u>€100,000</u>

⁴⁷ Section 766A(1)(b)(i) TCA 1997. This section was amended by section 25(3)(b) Finance Act 2019 to extend this definition to ensure grant funding from the European Commission and institutions of the Commission, and from non-European member states or bodies of such a state, is deducted from the qualifying expenditure on research and development activities.

Example no. 26(b) [30% R&D corporation tax credit rate]:

Company D incurred €1,000,000 of relevant construction expenditure in the accounting period ended 31 December 2024.

The qualifying R&D activities to be carried on by the company in that building over the specified relevant period (four years from the date of first use in 2024) represents 40% of all activities carried on. The R&D tax credit under section 766D is calculated as follows:

Specified relevant expenditure:	40% of €1,000,000 =	€400,000
Tax credit:	€400,000 @ 30% =	<u>€120,000</u>

5.2 When a building / structure is sold, or ceases to be used for R&D

The R&D credit is claimable as long as there is a minimum 35% usage of the building for R&D activity over a period of four years beginning on the date it is brought into use.⁴⁸ The R&D credit is however clawed back if, within ten years of the accounting period for which a credit is claimed, the building or structure is sold, or is used for purposes other than either the carrying on of R&D activities or the same trade that was carried on by the company at the beginning of the specified relevant period and to which the R&D activity was related.⁴⁹ In respect of claims for the R&D tax credit under section 766A, or the R&D corporation tax credit under section 766D, Revenue will claw back the tax credit already used by the company, amounts paid to the company, and will withdraw any excess credits surrendered by, or any credits unused by, the company.

Example no. 27(a) [25% R&D tax credit rate]:

ABC Company incurred construction costs of €100,000 in 2017 on the construction of a building to be used wholly and exclusively for R&D activities. It received an R&D credit of €25,000 (i.e. €100,000 x 25%) in respect of that expenditure, which it offset against its CT liability for 2017. The building was sold in 2018.

For tax year 2017, the R&D credit granted to ABC Company in 2017 will be clawed back as Schedule D Case IV income as follows:

Total relief granted	€25,000
Sch. D Case IV income (€25,000 X 4)	€100,000
Tax Clawed Back @ 25% (€100,000 @ 25%)	€25,000

⁴⁸ Section 766A(1)(a) TCA 1997.

⁴⁹ Section 766A(3) TCA 1997; section 766D(3) TCA 1997.

Example no. 27(b) [30% R&D corporation tax credit rate]:

ABC Company incurred construction costs of €100,000 in 2024 on the construction of a building to be used wholly and exclusively for R&D activities. It received an R&D corporation tax credit of €30,000 (i.e. €100,000 x 30%) in respect of that expenditure, which it offset against its CT liability for 2024. The building was sold in 2025.

The R&D credit granted to ABC Company in 2024 will be clawed back as Schedule D Case IV income as follows:

Total relief granted	€30,000
Sch. D Case IV income (€30,000 X 4)	€120,000
Tax Clawed Back @ 25% (€120,000 @ 25%)	€30,000

Example no. 28:

PSR Company incurred relevant R&D expenditure of €100,000 in 2016 on the construction of a building to be used wholly and exclusively for R&D activities. It received an R&D credit of €25,000 (i.e. €100,000 x 25%) in respect of that expenditure.

The building was sold in 2018. The company offset €12,000 against its CT liability for 2016 and carried forward the excess balance of €13,000.

It used €8,000 of this excess against its CT liability for 2017, leaving an excess of €5,000 still unused.

The R&D credit claimed will be clawed back in 2018 as follows:

Unused credit of €5,000 <u>withdrawn</u>	
Total tax relief claimed (offset):	€20,000
(€12,000 for 2016 + €8,000 for 2017)	
Sch. D Case IV income (€20,000 X 4)	€80,000
Tax clawed back in 2018 (25% of €80,000)	€20,000

Example no. 29(a) [25% R&D tax credit rate]:

XYZ Company incurred relevant R&D expenditure of €200,000 in the accounting period ended 31 December 2022 on the construction of a building used wholly and exclusively for R&D activities. The company claimed an R&D corporation tax credit of €50,000 (i.e. €200,000 x 25%) in accordance with section 766D.

The first instalment due in respect of the R&D corporation tax credit was €25,000 and was claimed in the accounting period ended 31 December 2022. The company elected to have the first instalment of the R&D corporation tax credit paid in full by Revenue to the company.

The second instalment of the R&D corporation tax credit was €15,000. This was claimed on the company's Form CT1 filed for the accounting period ending 31 December 2023. The company elected to have the second instalment of the R&D corporation tax credit paid in full by Revenue.

The third instalment of the R&D corporation tax credit was €10,000. This was claimed on the company's Form CT1 filed for the accounting period ending 31 December 2024. The company elected to have the third instalment of the R&D corporation tax credit treated as an overpayment of tax.

The building was subsequently sold in 2027 and as a result the R&D corporation tax credit claimed of €50,000 will be clawed back as follows:

Total R&D corporation tax credit claimed	€50,000
Schedule D Case IV income (€50,000 x 4)	€200,000
Tax clawed back in 2027 (€200,000 @ 25%)	€50,000

Example no. 29(b) [30% R&D corporation tax credit rate]:

XYZ Company incurred relevant R&D expenditure of €200,000 in the accounting period ended 31 December 2024 on the construction of a building used wholly and exclusively for R&D activities. The R&D corporation tax credit rate for this period is 30%. The company claimed an R&D corporation tax credit of €60,000 (i.e. €200,000 x 30%) in accordance with section 766D.

The first instalment due in respect of the R&D corporation tax credit was €50,000 and was claimed in the accounting period ended 31 December 2024. The company elected to have the first instalment of the R&D corporation tax credit paid in full by Revenue to the company.

The second instalment of the R&D corporation tax credit was €6,000. This was claimed on the company's Form CT1 filed for the accounting period ending 31 December 2025. The

company elected to have the second instalment of the R&D corporation tax credit paid in full by Revenue.

The third instalment of the R&D corporation tax credit was €4,000. This was claimed on the company's Form CT1 filed for the accounting period ending 31 December 2026. The company elected to have the third instalment of the R&D corporation tax credit treated as an overpayment of tax.

The building was subsequently sold in 2027 and as a result the R&D corporation tax credit claimed of €50,000 will be clawed back as follows:

Total R&D corporation tax credit claimed	€60,000
Schedule D Case IV income (€60,000 x 4)	€240,000
Tax clawed back in 2027 (€240,000 @ 25%)	€60,000

5.3 Plant and Machinery⁵⁰

Expenditure on plant and machinery may qualify for the R&D credit where such expenditure also qualifies for capital allowances. However, where plant and machinery is used for qualifying R&D and for other non-R&D purposes such as production, the cost of the plant and machinery should be apportioned on a just and reasonable basis over each relevant period of its useful economic life.

If an apportionment that has already been made in this manner is later shown **not** to be "just and reasonable", a revised apportionment must be made in respect of each relevant accounting period and brought to account in the tax return for the period in which the adjustment is identified.

For the purposes of determining the amounts of expenditure on plant and machinery to be included in any computation of the R&D credit due under section 766 or section 766C, Revenue is prepared to accept that expenditure on plant and machinery may be treated as incurred on either (1) the date the plant and machinery is first brought into use for the purposes of a trade, or (2) the date the expenditure becomes payable. This latter option is subject to a condition that the credit will be clawed back if the plant or machinery is not brought into use for the purpose of a trade within four years of the expenditure becoming payable.⁵¹

In the exceptional circumstance of the Covid-19 pandemic, and subject to appropriate checks, Revenue may accept in certain circumstances that it was not possible to bring the plant and machinery into use for the purposes of the trade within the time limit of the expenditure becoming payable due to delays in the process caused solely by the pandemic.

⁵⁰ Section 766(1A) TCA 1997.

⁵¹ Finance (No.2) Act 2023 clarified the treatment of plant & machinery in respect of claims made under section 766C. See section 766(1)(A) TCA 1997.

Example no. 30(a) [25% R&D tax credit]:

Company A incurred expenditure on plant or machinery of €100,000 in accounting period ending 31 December 2020 and in accounting period ending 31 December 2021. This machinery was used for both R&D activities and production processing. Company A analysed the plant and machinery usage on a “machine hour basis”.

During a typical week over the accounting period ending 31 December 2020, the machine was used for 25 hours of R&D and 30 hours of product production. During a typical week over the accounting period ending 31 December 2021, the machine was used for 10 hours of R&D and 45 hours of product production.

Therefore, Company A should apportion the cost of the plant or machinery as follows:

Accounting period ending	2020	2021
Annual cost of machinery or plant	€100,000	€100,000
Cost relevant to R&D	€ 45,455	€18,182
	[€100,000 X (25/55)]	[€100,000 X (10/55)]
R&D credit due (@ 25%)	€ 11,364	€4,546

Example no. 30(b) [30% R&D corporation tax credit rate]:

Company A incurred expenditure on plant or machinery of €100,000 in accounting period ending 31 December 2024 and in accounting period ending 31 December 2025. This machinery was used for both R&D activities and production processing. Company A analysed the plant and machinery usage on a “machine hour basis”.

During a typical week over the accounting period ending 31 December 2024, the machine was used for 25 hours of R&D and 30 hours of product production. During a typical week over the accounting period ending 31 December 2025, the machine was used for 10 hours of R&D and 45 hours of product production.

Therefore, Company A should apportion the cost of the plant or machinery as follows:

Accounting period ending	2024	2025
Annual cost of machinery or plant	€100,000	€100,000
Cost relevant to R&D	€ 45,455	€18,182
	[€100,000 X (25/55)]	[€100,000 X (10/55)]
R&D credit due (@ 30%)	€ 13,637	€5,455

6. Subcontracting R&D Activity

6.1 When R&D is sub-contracted out, when is the credit allowable?

The requirement in the definition of qualifying R&D activity that it be carried on “by it” (i.e. the company) denotes that the activities must be carried on **by the claimant company** and not by another person. There are two situations where relief is available to a company that has not carried out all of the qualifying R&D itself:

1. A company which incurs expenditure in the carrying on by it of qualifying R&D and pays a sum to a **university or institute of higher education** to carry out qualifying R&D activities in a relevant Member State⁵², can claim relief. Relief will be restricted to 15% of the expenditure incurred by the company itself on R&D activities or €100,000, whichever is the greater, subject to the company incurring at least the same level of expenditure on qualifying activity which it carries out itself. For accounting periods ending before 22 December 2019 this relief is restricted to 5%.⁵³
2. A company which incurs expenditure in the carrying on by it of qualifying R&D and pays a sum to another person (**not to a university or institute**) who is not a connected person⁵⁴, in order for that person to carry out qualifying R&D activities for the company, can claim relief. Relief will be restricted to 15% of the expenditure incurred by the company itself on qualifying R&D activities or €100,000, whichever is the greater, subject to the company incurring at least the same level of expenditure on qualifying activity which it carries out itself⁵⁵.

The limits set out in 1 and 2 above (to pay a university or institute of higher education and to pay a sub-contractor) are applied separately; these amounts are limited by reference to the company incurring at least the same level of expenditure on qualifying activities.

It is important to note that the outsourced activity must constitute qualifying R&D activity of the company which appointed the sub-contractor, and not necessarily R&D of the sub-contractor.

In order to claim the R&D credit for these costs, the company must notify the sub-contracting party in writing that they may not make a claim for the either the R&D tax credit or the R&D corporation tax for these purposes.

⁵² The definition of ‘relevant member state’, has been amended by section 58 of the Withdrawal of the United Kingdom from the European Union (Consequential Provisions) Bill 2020, to ensure that, all other conditions being met, activities undertaken in the UK will continue to be qualifying R&D.

⁵³ Section 766(1)(b)(vii) TCA 1997.

⁵⁴ A connected person is generally a person (including a company) who can exercise control over the company as set out in section 10 TCA 1997.

⁵⁵ Section 766(1)(b)(viii) TCA 1997. This provision applies to accounting periods commencing on or after 1 January 2014. For accounting periods ending prior to this date, the relief is restricted to 10% of the expenditure incurred by the company in the carrying on by it of qualifying R&D activity.

From 22 December 2019, this notification must be made in advance of making the payment or on the date the payment is made.⁵⁶ Where the outsourced activity is undertaken by a person who could not claim the R&D tax credit or R&D corporation tax credit (for example an individual, a non-resident 3rd party which does not have a branch in the State, a recruitment agency providing staff), Revenue will accept that a notification is not required in these cases.

The following table illustrates the current and historical position:

	University or Institute of higher education	Paid to another person (not to a university or institute)
Accounting periods ending up to and including 31 December 2011	5% of qualifying expenditure	10% of qualifying expenditure
Accounting periods commencing on or after 1 January 2012	The greater of 5% of qualifying expenditure or up to €100,000	The greater of 10% of qualifying expenditure or up to €100,000
Accounting periods commencing on or after 1 January 2014	the greater of 5% of qualifying expenditure or up to €100,000	The greater of 15% of qualifying expenditure or up to €100,000
Accounting periods commencing on or after 22 December 2019	the greater of 15% of qualifying expenditure or up to €100,000	The greater of 15% of qualifying expenditure or up to €100,000

⁵⁶ Section 766(1)(b)(viii) TCA 1997 as amended by section 25(2)(a)(ii)(III) Finance Act 2019.

Example no. 31:

Company A incurred €2,500,000 expenditure in the carrying on by it of R&D activities in the accounting period ended 31 December 2023. In addition, it paid €120,000 to a university and €300,000 to an unconnected third party, Company Z, to carry out R&D activities on its behalf. The company incurred the same level of expenditure in the carrying on of R&D in the accounting period ended 31 December 2024 and incurred the same amount in respect of payments to a university and unconnected third party, Company Z, in that period.

In relation to the company's R&D claims for 2023 and 2024, the following applies:

In relation to the **€120,000** paid to the **university**, Company A may claim the higher of 15% of its own expenditure on R&D, which equates to €375,000 (€2,500,000 @ 15%) **or** up to €100,000 of direct expenditure, whichever is the greater. Therefore, it can claim the full amount of €120,000 paid to the university, as this is less than the maximum allowable.

In relation to the **€300,000** paid to **Company Z**, Company A may claim the higher of 15% of its own expenditure on R&D, which equates to €375,000 (€2,500,000 @ 15%) **or** up to €100,000 of direct expenditure, whichever is the greater. Therefore, it can claim the full amount of the €300,000 paid to Company Z, as this is less than the maximum allowable.

Company A's claim for the accounting period ended 31 December 2023 and the claim for the accounting period ended 31 December 2024 will be made up as follows:

	31 December 2023	31 December 2024
	€	€
Company A's own expenditure	2,500,000	2,500,000
Allowable amount paid to the university	120,000	120,000
Allowable amount paid to Company Z	<u>300,000</u>	<u>300,000</u>
Total Company A qualifying expenditure	2,920,000	2,920,000
R&D corporation tax credit due	<u>730,000</u>	<u>876,000</u>

Note 1

The R&D corporation tax credit for the accounting period ended 31 December 2023 is calculated at the 25% rate. The R&D corporation tax credit for the accounting period ended 31 December 2024 is calculated at the 30% rate.

Note 2:

A claim for the credit must be made within 12 months from the end of the accounting period in which the expenditure was incurred.

7. Group Expenditure on R&D

7.1 Rules on group structures⁵⁷

Companies will be regarded as members of a group if one is a 51 per cent subsidiary of the other, or both are 51 per cent subsidiaries of a third company, irrespective of the country of residence of each company.

A company shall not be regarded as a subsidiary of another unless, in addition to the 51 per cent shareholding relationship, the parent company is also entitled to 51 per cent of the profits available for distribution to shareholders, and would be entitled to a 51 per cent share of any assets available for distribution in the event of a winding up of the company⁵⁸.

In determining whether this is the case, ownership of shares by a company dealing in shares is ignored.

The order of offset for credits claimed in respect of qualifying R&D activity in a group is the same as that for a company (See [section 2.9](#))

Example no. 32:

ABC Ltd owns 60% of the shares of DEF Ltd. DEF Ltd owns 90% of the shares of XYZ Ltd.

As ABC Ltd effectively controls 60% of DEF Ltd and 54% (60% @ 90%) of XYZ Ltd, all three companies are members of a group for the purpose of claiming the R&D credit.

7.2 Qualifying group expenditure on R&D⁵⁹

Qualifying group expenditure is the aggregate of expenditure on R&D incurred by member companies of a group in a relevant period.

The first relevant period will generally be the first period of one year ending at the end of the first common accounting period of the member companies of the group that commences on or after 1 January 2004. If the companies do not have a common accounting period, they must jointly elect which accounting date should be used.

Where one member of the group is not within the charge to Irish tax, that member's qualifying R&D expenditure is not taken into account when calculating qualifying group expenditure.

⁵⁷ Section 766(1)(b) TCA 1997

⁵⁸ Section 766(1)(b)(ii) TCA 1997 applies the group relief rules set out in ss.412 to 418 but applies a 51% rather than a 75% holding threshold.

⁵⁹ Section 766(1)(a) TCA 1997 – in the definition of “qualifying group expenditure”

Example no. 33

AB USA Corp, AB Ireland Ltd, and BA Ireland Ltd are all members of a group. AB Ireland Ltd and BA Ireland Ltd are within the charge to Irish tax but AB USA Corp is not. The group incurred R&D expenditure as follows:

	2021
AB USA Corp	€75,000
AB Ireland Ltd	€65,000
BA Ireland Ltd	€32,000

As AB USA Corp is not within the charge to Irish tax, its R&D expenditure is not taken into account for the purpose of calculating qualifying group expenditure.

Qualifying group expenditure for 2021 is as follows:

AB Ireland Ltd	€65,000
BA Ireland Ltd	€32,000
Qualifying group expenditure 2021	€97,000

7.3 Allocation of group expenditure between group members⁶⁰

The members of the group may, by election, allocate qualifying group expenditure between group members as they wish. Alternatively, the qualifying group expenditure is allocated by reference to the following formula:

$$\frac{Q \times C}{G}$$

Where:

- **Q** is the qualifying group expenditure on R&D in the relevant period
- **C** is the amount of expenditure on R&D incurred by the company in the relevant period at a time when the company is a member of the group, and
- **G** is the group expenditure on R&D in the relevant period.

Example no. 34:

A group of companies, ABC Group, had an aggregate R&D expenditure of €400,000 in the relevant period commencing 1 October 2024 as follows:

	2024
Company A	€200,000
Company B	€200,000
<u>Company C</u>	<u>€NIL</u>
Total	€400,000

Company C which is a member of the group did not carry on qualifying R&D activities during the period in question.

The total amount of qualifying expenditure incurred by the group for the 12-months ended 30 September 2025 is therefore €400,000.

Qualifying companies of the group who have incurred the qualifying R&D expenditure may allocate the qualifying group expenditure however they so wish. They may divide it equally between the group members or allocate it all to one company within the group where the qualifying companies elect to do so. In this example, companies A and B could elect to allocate all the qualifying R&D expenditure (€400,000) to company C.

In the absence of notification, Revenue will allocate according to the proportion of qualifying activity carried on by each group member as follows:

Company A	[€400,000 x (€200,000 / €400,000)]	€200,000
Company B	[€400,000 x (€200,000 / €400,000)]	€200,000
<u>Company C</u>	[€400,000 x (€ 0 / €400,000)]	<u>€0</u>
Total		€400,000

⁶⁰ Section 766(3) TCA 1997; s.766C(5) TCA 1997

7.4 Transfer of R&D activity within a Group

7.4.1 Transfer of R&D activity within a Group under section 766⁶¹

This section applies in respect of claims for the R&D tax credit made under section 766.

Where a company which carried on qualifying R&D activity, and has made a claim under section 766, ceases to carry on a trade, and another company commences to carry on that trade and continues the qualifying R&D activity related to that trade which was carried on by the ceasing company, the “successor company” may claim any R&D tax credit amounts not used by the “predecessor company” provided that both companies were members of the same group of companies at the time of the transfer of the trade and provided that the “successor company” carries on the qualifying R&D activity for a period of at least 2 years after the transfer.

In these circumstances, the “successor” company may use any unused credits to reduce its current or future CT liability, but it may not claim a payable tax credit in respect of any such unused amounts.

Example no. 35:

ABC Parent Ltd wishes to transfer R&D activities from ABC Sub Ltd. ABC Parent Ltd owns 100% of the shares of ABC Sub Ltd. It can transfer the activities either by way of a transfer of the trade up to ABC Parent Ltd or by way of a merger between ABC Parent and ABC Sub.

Either a transfer of the trade or a merger would satisfy the requirements under section 766(4C), once the companies are, at the time of the event, members of the same group under section 411(1) TCA 1997 and all other requirements under section 766(4C) are satisfied.

7.4.2 Transfer of R&D activity within a Group under section 766C and section 766D⁶²

Where a company which carried on qualifying R&D activities and had made a claim under section 766C or section 766D, ceases to carry on a trade (the ‘predecessor’), and another company commences to carry on that trade and continues the research and development activities related to the trade of the predecessor company (the ‘successor’), the successor may claim the instalments that the predecessor would have been entitled to.

It is necessary that both companies are members of the same group of companies (within the meaning of section 411(1)) at the time of the cessation and commencement of the trade

⁶¹ Section 766(4C) TCA 1997

⁶² Section 766C(7A) TCA 1997, section 766D(3A) TCA 1997

and that the successor company carries on the qualifying R&D activities for a period of at least 2 years after the transfer.

The successor will be entitled to the instalments that the predecessor would have been entitled to, provided the predecessor has not specified, in respect of each instalment, that the amount or any portion of that amount is to be treated as an overpayment of tax or paid to the company by Revenue.

For accounting periods commencing on or after 1 January 2023, a claim for the R&D corporation tax credit must be made under section 766C and/or section 766D.

8. Requirements for a valid claim⁶³

The legislative definition of a qualifying company requires that such a company carries on qualifying R&D activity and **maintains a record** of expenditure incurred by it in carrying on that activity. Proper records must be maintained by companies claiming the R&D credit. Records need not be paper based in all cases. Where a company maintains effective electronic records, for example relating to project management or staff attendance, these will meet the record-keeping requirement. However, **contemporaneous** records, whether in a hard copy or electronic format, must be available for inspection by Revenue officials.

To avail of the R&D tax credit under section 766 or section 766A, or the R&D corporation tax credit under section 766C or section 766D, the company must be in a position to demonstrate that its claim can satisfy two essential tests. First, that the activity is qualifying R&D activity (referred to as the “Science Test”) and, second, that the costs incurred in the carrying on of qualifying activity have been properly tracked and accounted for (referred to as the “Accounting Test”). Records must be kept in order to satisfy both tests.

Section 766C and section 766D specifically state that a valid claim must be made to Revenue before the R&D corporation tax credit can be offset or paid to the company⁶⁴. A valid claim means all the information that Revenue reasonably requires to determine whether and to what extent the credit is due for an accounting period⁶⁵. The concept of a valid claim in this regard is not new and the insertion of the reference within section 766C and section 766D is made to ensure that the timelines in respect of the payment of the R&D corporation tax credit, as set out above in [section 2.8.2](#), operate as intended.

[Appendix 3](#) sets out a suggested file layout that would provide support for an R&D tax credit or R&D corporation tax credit claim. Appendix 3 was formulated based on feedback from Revenue compliance officers and independent experts, from their experience of material that sufficiently supports the science test and accounting tests. As each R&D project is by definition unique, further supplementary/clarifying information may be requested.

8.1 The Science Test

This test ensures the activities under review are consistent with the statutory definition of R&D activities.

⁶³ Section 766(1)(a) TCA 1997 – in the definition of “qualified company”.

⁶⁴ Section 766C(12) and section 766D(11) TCA 1997

⁶⁵ Section 766C(14) and section 766D(13) TCA 1997

Records required to be maintained to satisfy the science test

- a) A description of the R&D activities, the methods to be used and what the company seeks to achieve by undertaking the activities concerned.
- b) The field of science and technology concerned.
- c) The scientific or technological advancement that is the goal of the R&D activities.
- d) The scientific or technological uncertainty that the company is seeking to resolve in its R&D activities.
- e) Evidence that the scientific or technological advance(s) sought had not already been achieved and that the scientific and/or technological uncertainties that the company was seeking to overcome were **not already resolved** or that such resolution would not be available to a competent professional working in the field, for example, evidence that a comprehensive literature review to determine the current status of scientific or technological knowledge in the area had been conducted prior to commencing the project.
- f) Details of the systematic investigation, including
 - the hypothesis advanced.
 - the series of experiments or investigations undertaken to test the hypothesis.
 - documentary evidence of the necessity for each major element and how it fits into the project as a whole.
 - dated documents of the original scientific or technological goals, the progress of the work, how it was carried out and the conclusions.
 - indicators or measures identified at the commencement of the project to determine if the scientific or technological objectives of the R&D activities are met.
- g) the qualifications, skill and experience of the project manager.
- h) the numbers, qualifications and skill levels of other personnel working on the project.

8.2 The Accounting Test

This test ensures that the expenditure claimed as being incurred on qualifying R&D activities is being correctly claimed.

Companies should be able to provide details of the allocation of resources and associated costs to each stage of a project. Details of the targets and deliverables specifically related to the resolution of scientific or technological uncertainties and the advances in scientific or technological knowledge sought **should be directly associated with relevant accounting records**.

Records containing the following information, if relevant, are required:

- a) The dates of commencement and termination of the project. The date of resolution of the scientific or technological uncertainty is a determining factor when considering

where an R&D activity ends, and activity associated with commercial exploitation begins. Costs incurred after the R&D phase is completed do not qualify for the relief.

- b) A project plan with appropriate milestones and deliverables for management of the project.
- c) Details of progress made against the project plan.
- d) Details of the personnel involved in the project, their qualifications and the amounts of their time allocated to the project.
- e) The location where the R&D activities took place, and a breakdown of costs associated with the location (e.g. apportionment of light, heat etc.).
- f) Details of any amounts paid to universities or institutes of higher education and the qualifying R&D activity carried out by them on behalf of the company.
- g) Details of any amounts paid to non-academic subcontractors and the qualifying R&D activity carried out by them on behalf of the company.
- h) Details of the methods and bases of apportionment of all expenditure associated with the R&D. The appropriate allocation factor for costs will vary between sectors and may indeed vary between companies within sectors. The appropriate allocation factor must be determined by each claimant company as one which provides a reasonable nexus with the costs incurred. Revenue will accept the company's allocation where it is clear that the management accountant, financial director or an appropriate director with knowledge of the company documents, chooses the percentage of the overall costs to be allocated, if that choice is *bona fide*, reasonable, and based on the facts of the individual claim.

8.3 Grant aided R&D accounting review

Small or micro sized companies that are carrying out an R&D project to which [section 2.7](#) applies, must still have all of the records required for the accounting test, available for review.

The following material is either exempt from or not required to be published under the Freedom of Information Act 2014.

[...]

8.4 Method of Record Keeping

In order to qualify for the R&D tax credit or R&D corporation tax credit, it is important that—

- all record entries are made on a timely and consistent basis;
- all records are kept on a continuous basis; and
- all linking papers to accounts are kept.

The claimant company must be able to provide reliable assurances as to the integrity of the records, including the author/creator and date of creation of each record.

8.5 Different Industry Norms

Revenue is aware that different industries have different regulatory requirements, and that R&D activities may take place within different time frames and be recorded in different ways across various industries. For example, R&D activity in the pharmaceutical industry typically takes place over a multi-year time frame, is heavily regulated, and is monitored and recorded in a very systematic and methodical way.

The records required for Revenue purposes should generally be available within a company for its own internal purposes. However, claimant companies should take care, whatever approach to record-keeping is used, that it will be sufficient to clearly identify qualifying activity and associated costs.

The demonstration of a systematic approach and the preparation of appropriate contemporaneous evidentiary materials is an essential element of any R&D claim. Such evidence does not necessarily have to be available in traditional hard copies, but may be available electronically. When such resources are used to support a claim, they should clearly indicate the author/creator, and the date of creation.

8.6 Claiming the credit

8.6.1 Pre-filing notification requirement under section 766C and section 766D⁶⁶

For accounting periods commencing on or after 1 January 2024, a company is required to notify Revenue of its intention to file a claim under section 766C or section 766D ('pre-filing notification'). The pre-filing notification applies to companies which are claiming the R&D corporation tax credit for the first time, and companies which have not claimed the R&D credit in any of the previous three accounting periods. The pre-filing notification must be in writing in the form prescribed by Revenue and must be filed at least 90 days before the claim for the credit is made.

⁶⁶ Section 766C(17) TCA 1997 and section 766D(16) TCA 1997

Example 36:

C Ltd intends to file an R&D corporation tax credit claim in relation to qualifying R&D expenditure incurred by the company in the accounting period ended 31 December 2024. The company has not filed an R&D corporation tax credit (or R&D tax credit) claim in the past. The company intends to file its R&D corporation tax credit claim on the completed Form CT1 on 31 March 2025. Therefore, the pre-filing notification form should be filed with Revenue on or before 31 December 2024.

Where a claim is being made under section 766C, the company must provide such details in relation to the claim as may be specified in the prescribed form including:

- (i) the name, address and corporation tax number of the company,
- (ii) a description of the R&D activities carried out by the company,
- (iii) the number of employees carrying on R&D activities, and
- (iv) details of expenditure incurred by the company on R&D activities which has been or is to be met directly or indirectly by grant or other assistance⁶⁷.

A brief synopsis of the R&D activities which were carried out by the company should be provided by the company. This should include details of the number of qualifying R&D projects being undertaken and the types of R&D activities involved, including examples.

Where a claim relates to expenditure incurred under section 766D, the company must provide such details as required in the prescribed form including:

- (i) the name, address and corporation tax number of the company,
- (ii) confirmation that the building or structure is [a qualifying building](#),
- (iii) the proportion of the qualifying building which is to be used for the purpose of carrying on by the company of R&D activities within the meaning of section 766(1)(a) for the specified relevant period, and
- (iv) details of expenditure incurred by the company which has been or is to be met directly or indirectly by grant assistance or other assistance⁶⁸.

In either case, Revenue may require the company to provide additional information, explanations and particulars and to give any assistance which may reasonably be required for the purposes of inspecting the information which is provided as part of the pre-filing notification.

⁶⁷ Section 766(1)(b)(v) TCA 1997

⁶⁸ Section 766A(1)(b)(i) TCA 1997

Where a company is required to submit a pre-filing notification, the pre-filing notification form should be completed and submitted through MyEnquiries, selecting the following:

Category	Corporation Tax (CT)
Subcategory	R&D Pre-filing Notification

When completing the Form CT1, the company should tick the relevant box on the Research and Development Tax Credit panel of the Form CT1 where applicable, indicating that the pre-filing notification has been submitted to Revenue.

8.6.2 The Form CT1

Where a company is satisfied that it can comply with the requirements of the legislation and has maintained the necessary supporting records, a claim for the R&D credit may be made by completing the relevant sections of the Form CT1 through the Revenue Online System (ROS).

For 2022 only, an R&D Specified Return was required to be submitted along with the Form CT1 2022 where a company was making a claim under section 766C, section 766D, section 766(4D) or section 766A(4C). For all subsequent periods, claims should be made on the Form CT1 only.

For claims under section 766C and/or section 766D, the company must specifically provide details of the following in the Form CT1:

1. Details of the amounts of the 1st, 2nd and 3rd instalments, as appropriate, that are being claimed in accordance with section 766C(6)(a), section 766C(6)(b), section 766C(6)(c) and/or section 766D(5)(a), section 766D(5)(b), section 766D(5)(c).
2. In respect of each instalment, whether such amounts, or any portion of such amounts, are to be –
 - (i) treated as an overpayment of tax, for the purposes of section 960H, or
 - (ii) paid to the company by the Revenue Commissioners.⁶⁹
3. Details of the amount of expenditure referable to R&D activities that is incurred by the company in the relevant accounting period in respect of
 - (i) plant or machinery
 - (ii) the emoluments paid to employees who are carrying on R&D activities; and

⁶⁹ Section 766C(7) and section 766D(6) TCA 1997

(iii) the amount of remaining qualifying expenditure incurred by the company in the relevant accounting period.⁷⁰

The amounts to be included are in relation to the amount of expenditure which is attributable to R&D activities incurred by the company. These amounts should therefore be net of any grant funding received.

Example No.37:

Company E incurred expenditure on R&D of €1,500,000 in the accounting period ended 31 December 2024. The company received grant funding of €500,000 in respect of the R&D project. The amount of qualifying expenditure for inclusion in the Form CT1 is net of grant funding, therefore, qualifying expenditure incurred was €1,000,000 (€1,500,000 - €500,000).

The qualifying R&D expenditure consisted of plant and machinery (€100,000), emoluments of employees carrying on qualifying activities (€800,000) and other qualifying costs (€100,000). The total amount of qualifying expenditure incurred of €1,000,000 (i.e. €100,000 + €800,000 + €100,000) gave rise to an R&D corporation tax credit of €300,000 (i.e. €1,000,000 @30%).

For the purposes of completing the Form CT1, the company must provide the following information in accordance with section 766C(9)(b) TCA 1997:

Plant and machinery as referred to in section 766(1A)(a)	€100,000
Emoluments of employees carrying on qualifying R&D activities	€800,000
The sum of the remaining qualifying expenditure incurred by the company during the accounting period concerned	€100,000

- For accounting periods ending on or after 31 December 2023, details of the amount of the R&D credit which is non-refundable, which is available to be carried forward from prior periods and which may be used to reduce corporation tax in future accounting periods⁷¹.

Example No.38:

Company G incurred R&D tax credits in prior years which were made up of payable and non-refundable amounts. The payable amounts which arose under section 766/section 766A have been fully utilised in prior years with no excess amounts being carried forward to the accounting period ended 31 December 2023. The company does, however, have credits that are non-refundable and have not previously been utilised against corporation tax liabilities

⁷⁰ Section 766C(9) TCA 1997

⁷¹ Section 766C(9)(b)(iii) and section 766D(8A) TCA 1997

of the company. These amounts are available to be carried forward for offset against future corporation tax liabilities and details of these amounts must be provided on the Form CT1.

As of 31 December 2022, the company had non-refundable R&D tax credits of €100,000. The company's corporation tax liability for the accounting period ended 31 December 2023 is €85,000.

For the accounting period ended 31 December 2023, the company made a R&D corporation tax credit claim under section 766C for €20,000. The R&D corporation tax credit claimed is not offset against corporation tax liabilities (unlike the utilisation of the credits under section 766). The amount of the first instalment is less than €25,000, therefore the full amount of the credit (i.e. €20,000) is payable to the company in year 1. The company specifies that this amount is to be paid to the company in accordance with section 766C(7)(b) TCA 1997.

Tax position for Company G for the accounting period ended 31 December 2023:

Corporation Tax liability	€85,000
Less R&D tax credits (section 766) carried forward	<u>(€85,000)</u>
Corporation Tax liability	Nil

R&D credit position for Company G:

Current year R&D corporation tax credit paid to company	€20,000
R&D tax credits brought forward from 2022 (non-refundable)	€100,000
Offset against corporation tax in 2023	<u>(€85,000)</u>
R&D credits to carry forward to 2024	€15,000

Therefore, the amount to be reflected on the Form CT1 is the amount to be carried forward to future periods, in this case, €15,000.

It is important that all relevant returns are submitted in order for an R&D claim under sections 766C, 766D, 766(4D) or 766A(4C) to be processed. This includes any related returns such as iXBRL financial statements, where required.

No supporting R&D documentation is required to be submitted with the return. However, supporting documentation may be requested subsequently to verify that the claim is a valid claim. In this respect, claiming a R&D credit is no different from claiming any other CT relief or tax credit.

8.7 Penalty Application

In relation to compliance interventions carried out on R&D claims, the two main elements of the claim are the science test and the accounting test.

Where an R&D intervention results in a settlement, penalties will apply in line with the legislation^{72 73} and the Code of Practice for Revenue Compliance Interventions. Publication may also apply.

Under section 766 or section 766A, where the penalty chargeable is on a 'specified amount' for the purposes of section 1077E(11) and section 1077E(12), the amount of credit will be deemed to be a reference to an amount of tax.

For the purposes of the R&D corporation tax credit under section 766C or section 766D, where a penalty is chargeable in accordance with section 1077F(3) and section 1077F(4), the penalty will be chargeable on amounts offset by the company, amounts paid to the company and amounts unpaid to the company⁷⁴.

8.8 Restriction to offsets⁷⁵

Where an R&D tax credit which has been claimed is being clawed back, section 766(7B)(c)(iii) prohibits the offset of any credits, losses, expenses or allowance against that tax liability. The clawback amount shall not attract the close company surcharge. The same restrictions apply in respect of any clawback of an R&D corporation tax credit under section 766C(10)(c)(ii) and section 766D(9)(c)(ii).

⁷² Section 25(2)(g)(i) Finance Act 2019 substituted a new paragraph for paragraph (b) of section 766(7B) TCA 1997. An overclaim of the research and development tax credit, which has not been paid out, will attract a penalty, for accounting periods commencing on or after 22/12/2019.

⁷³ Finance Act 2022 inserted a new paragraph for paragraph (c)(i) of s.766(&B); see also s.766C(10) and s.766D(9) TCA 1997

⁷⁴ Section 766C(10)(b) and Section 766D(9)(b) TCA 1997

⁷⁵ Inserted by section 25(2)(g)(ii)(II) Finance Act 2019, w.e.f. 22/12/2019

9. Payment to ‘Key Employees’⁷⁶

As an incentive to certain staff, a company may transfer some or all of its R&D tax credit or R&D corporation tax credit to ‘key employees’.

In order to be considered as a ‘key employee’, the following criteria must be satisfied⁷⁷:

- The employee must perform at least 50% of their duties in “the conception or creation of new knowledge, products, methods and systems” and 50% or more of the cost of earnings from their employment must qualify as R&D expenditure.
- The employee must not be, or have been, a director of his or her employer company or an associated company and must not be connected⁷⁸ to such a director.
- The employee must not have, nor have had, an individual holding of more than 5% of the shares of the company or an associated company and must not be connected to a person who has such a material interest.

9.1 Payments to key employees under section 766

For R&D tax credit claims made under section 766, the amount of the credit that can be surrendered to key employees is limited to the amount the company could otherwise have used to reduce the CT liability in respect of the accounting period in which the qualifying R&D activity was carried out.

The option to surrender any part of the R&D tax credit is not available to loss-making companies. The company cannot surrender an amount that would have been due as a payable credit under section 766.

To surrender all or part of the R&D tax credit claimed under section 766, a company must:

1. Pay the amount of CT which it could otherwise have reduced.
2. Make a claim to Revenue,
and
3. Notify each key employee in writing of the amount surrendered to that employee.

If the company has any outstanding tax liabilities, including any balance of CT payable in respect of the accounting period in respect of which the credit arises, it will not be entitled to surrender any amount.

For accounting periods commencing on or after 1 January 2023, a claim for the R&D corporation tax credit can only be made under section 766C.

⁷⁶ Section 766(2A) TCA 1997; section 766C(2) TCA 1997.

⁷⁷ Section 472D(1) TCA 1997; Tax and Duty Manual 15-01-40

⁷⁸ A connected person is a spouse, civil partner or close relative. See Section 10 of The Taxes Consolidation for full details.

9.2 Payments to key employees under section 766C

For R&D corporation tax credit claims made under section 766C, where a company chooses to treat all or part of the credit as an overpayment of tax which is then set against any liabilities of the company, only the difference between the credit and the company's liabilities, known as the excess, can be surrendered to key employees. The amount surrendered cannot exceed the CT liability of the company in the accounting period in which the claim is made.

Under section 766C, to surrender all or part of the excess R&D corporation tax credit, the company claiming the credit must:

1. Specify that the R&D corporation tax credit, or any portion of it, is to be treated as an overpayment of tax;
2. Specify the amount, in excess of its tax liabilities, to be allocated to a key employee;
3. Notify each key employee in writing of the amount surrendered to that employee.

In respect of either the R&D tax credit under section 766 or the R&D corporation tax credit under section 766C, a key employee can claim the credit in the tax year following the tax year in which the accounting period of the company that surrendered the credit ends.

10. Consultation with other persons (Independent experts)⁷⁹

To ensure compliance with legislation, Revenue may examine the entitlement of certain claims to tax credit for R&D activities. Revenue may enlist the assistance of qualified individuals with specialised knowledge in the relevant field of science or technology. Those individuals act on a consultancy basis for Revenue and report to Revenue as to whether, in their opinion, the activities examined constitute R&D activities, as defined in section 766 of the Act. All such individuals are required to sign a confidentiality agreement with Revenue prior to engagement.

Where the opinion of such an expert is disputed by a claimant company, the expert may be required to give evidence before the Tax Appeals Commission or a court of law.

Before disclosing information to such experts, Revenue will notify the claimant company of the identity of the expert it proposes to engage and the information that it intends to disclose to that expert.

A claimant company may object to the use of a particular expert where it has reason to believe there would be a genuine conflict of interests. In any case of dispute, the claimant company will have the right of appeal to the Tax Appeals Commission against the use of a particular expert.

Tax & Duty Manual [Part 29-02-05](#) provides a detailed explanation of Revenue's procedure for the sourcing and appointment of independent experts.

⁷⁹ Section 766(7) TCA 1997.

11. Enhanced Regime for Small and Micro Companies

Measures to enhance the R&D tax credit for small and micro companies were introduced in section 766C by Finance Act 2019 and were subject to a commencement order. The commencement order in respect of these measures was not made. Finance Act 2022 deleted section 766C in respect of the measures for small and micro companies. Section 766C now contains the new R&D corporation tax credit introduced in Finance Act 2022.

Any claims for relief made in excess of that allowed under legislation which is in effect will be clawed back by Revenue.

The following material is either exempt from or not required to be published under the Freedom of Information Act 2014.

[...]

Appendix 1 Categories of Activities which may qualify for the R&D credit⁸⁰

Natural Sciences

1. Mathematics and computer sciences, including mathematics and other allied fields, computer sciences and other allied subjects, software development.
2. Physical sciences including astronomy and space sciences, physics and other allied subjects.
3. Chemical sciences including chemistry and other allied subjects.
4. Earth and related environmental sciences including geology, geophysics, mineralogy, physical geography and other geosciences, meteorology and other atmospheric sciences including climatic research, oceanography, volcanology, paleoecology and other allied sciences.
5. Biological sciences including biology, botany, bacteriology, microbiology, zoology, entomology, genetics, biochemistry, biophysics and other allied sciences, excluding clinical and veterinary sciences.

Engineering and Technology

1. Civil engineering including architecture engineering, building science and engineering, construction engineering, municipal and structural engineering and other allied subjects.
2. Electrical engineering, electronics including communication engineering and systems, computer engineering (hardware) and other allied subjects.
3. Other engineering sciences such as chemical, aeronautical and space, mechanical, metallurgical and materials engineering, and their specialised subdivisions; forest products; applied sciences such as geodesy and industrial chemistry; the science and technology of food production, specialised technologies of interdisciplinary fields, *e.g.* systems analysis, metallurgy, mining, textile technology and other allied subjects.

Medical Sciences

1. Basic medicine including anatomy, cytology, physiology, genetics, pharmacy, pharmacology, toxicology, immunology and immunohematology, clinical chemistry, clinical microbiology, pathology.
2. Clinical medicine including anaesthesiology, paediatrics, obstetrics and gynaecology, internal medicine, surgery, dentistry, neurology, psychiatry, radiology, therapeutics, otorhinolaryngology and ophthalmology.

⁸⁰ Statutory Instrument No. 434 of 2004.

3. Health sciences including public health services, social medicine, hygiene, nursing, epidemiology.

Agricultural Science

1. Agriculture, forestry, fisheries and allied sciences including agronomy, animal husbandry, fisheries, forestry, horticulture, and other allied subjects.
2. Veterinary medicine.

Appendix 2 Categories of Activity that are not research and development activities⁸¹

- a) research in the social sciences (including economics, business management, and behavioural sciences), arts, or humanities;
- b) routine testing and analysis for purposes of quality or quantity control;
- c) alterations of a cosmetic or stylistic nature to existing products, services or processes whether or not these alterations represent some improvement;
- d) operational research such as management studies or efficiency surveys which are not wholly and exclusively undertaken for the purposes of a research and development activity;
- e) corrective action in connection with breakdowns during commercial production of a product;
- f) legal and administrative work in connection with patent applications, records and litigation and the sale or licensing of patents;
- g) activity, including design and construction engineering, relating to the construction, relocation, rearrangement or start up of facilities or equipment other than facilities or equipment which is to be used wholly and exclusively for the purposes of carrying on by the company of research and development activities;
- h) market research, market testing, market development, sales promotion or consumer surveys;
- i) prospecting, exploring or drilling for, or producing, minerals, petroleum or natural gas;
- j) the commercial and financial steps necessary for the marketing or the commercial production or distribution of a new or improved material, product, device, process, system or service;
- k) administration and general support services (such as transportation, storage, cleaning, repair, maintenance and security) which are not wholly and exclusively undertaken in connection with a research and development activity.

⁸¹ Note: These definitions are set out in Statutory Instrument No. 434 of 2004 "Prescribed Research and Development Activities". However, section 66 subsection (1)(a)(ii) of Finance Act 2006 clarified that only expenditure wholly and exclusively incurred in the carrying on of qualifying activity is eligible to claim the R&D credit.

Appendix 3 R&D Credit Claim, Suggested File layout ⁸²

The following material is either exempt from or not required to be published under the Freedom of Information Act 2014. [...]	
Description per project⁸³	
1. Name of company which carried out the activities	
2. Name of Project	
3. The date the project commenced	
4. The date the project ceased (if applicable)	
5. The field of science or technology (referred to in S.I. No. 434/2004 - Taxes Consolidation Act 1997 (Prescribed Research and Development Activities) Regulations 2004)	
6.	
a. The activities are: <ul style="list-style-type: none"> • basic research • applied research, or • experimental development 	
b. Identifying which step on the Technology readiness level (TRL) scale the R&D process is operating, may be beneficial, when identifying if it is eligible as qualifying R&D expenditure under section 766 and section 766C TCA 1997: <ul style="list-style-type: none"> • Idea • Basic Research • Technology Formulation • Applied Research • Small Scale Prototype • Large Scale Prototype • Prototype System • Demonstration System • First of a Kind Commercial System • Full commercial application 	Include in Tab A Different industries enter and leave qualifying R&D expenditure at different levels on the TRL scale

⁸² This suggested file layout is based on Revenue's experience reviewing R&D tax credit claims. It is a basic guide to the contemporaneous documentation that Revenue would expect to see: documentation that should be retained when completing activities in respect of which it is intended to make a claim under section 766, section 766A, section 766C and section 766D TCA 1997 and Part 9 Chapter 5 TCA 1997. There is no requirement to keep the documentation in this format. The format is illustrative and is provided as guidance for those who wish it. Not all questions will be applicable to all industries, all companies or all projects. As each R&D project is by definition unique, further supplementary/clarifying information may be requested.

⁸³ Note file should be retained on a per project basis.

7. The specific scientific or technological advancement, which the company sought to achieve at the start of the project	
8. The specific scientific or technological uncertainty which it is intended will be (if the project is ongoing), resolved	
9. Work done to determine that the solution was not already known and available to a competent professional in the field at the time the R&D was commenced	<p>Include in Tab B</p> <p>Example: Extensive search on the internet resulted in no known solution, it is imperative to retain the results of the internet search as these results for that period in time cannot be recreated at a later date</p> <p>Example: retain details of journal searches</p> <p>Example: Literature review</p> <p>Example: Researched competitor's in the field</p>
<p>Science Test questions</p> <p>*Technical\scientific\competent professional involved in the project should complete this area, as if to be read by a professional in that field of expertise</p>	
10. The R&D comes within section 2.7 of this TDM	<p>Include in Tab C</p> <p>Provide details confirming this and skip to question 16 (Accounting Test questions)</p>
11. Where activities were aimed at developing a product for internal use (not as part of a product for sale to customers), what was the alternative action plan if activities had been unsuccessful?	Include in Tab D
<p>12. Knowledge Transfer:</p> <ul style="list-style-type: none"> • Acquired from group companies, • Acquired from third parties • Details of any outsourcing (link with Tab M on outsourcing costs) 	Include in Tab E
13. A summary of the systematic, investigative or experimental qualifying activities in relation to the project, including the location of the activities. The method used and details of the series of experiments or investigations undertaken to test the hypothesis must be included	<p>Include in Tab F</p> <p>Example: white board, notes copied and retained</p>

Other information which if available should be submitted with the scientific details	
14. Details of any academic research involved (e.g. MSc Project) please provide an acknowledgements page of the thesis or a supporting letter from the Host University	Include in Tab G (if applicable)
15. Report, if any, carried out by an independent expert into the activities ⁸⁴	Include in Tab H (if applicable) Example: Enterprise Ireland, IDA, Horizon 2020, Horizon Europe reports
Accounting Test questions	
16. The computation of the tax credit claimed in respect of each accounting period, showing clearly the threshold amount under section 766B (section 766B is not applicable for tax returns (Form CT1) due on or after 23 September 2023).	Include in Tab I
17. Computation of the tax credit claimed listing each line item (there should be no 'admin expenses' or 'general expenses' listed – this should be specific).	Include in Tab J – For display purposes, it may be preferable to have a summary expense list, such as would be included in a detailed Profit & Loss, supplemented by details of what expenses make up each line item in the summary (including reconciliations from the General Ledger codes to the figures, if necessary).
18. Staff cost details	Include in Tab K
a. The qualifications / experience of the project leaders	
b. Names, relevant qualifications/ experience and job titles and location of staff employed in activities, and details of how staff were allocated to various aspects of the project.	
c. Allocation basis where staff work on this and other projects. A description of the system used to record work on qualifying and non-qualifying projects should be included, and should at a minimum identify when staff record their work, who reviews, in that regard	Example: <ul style="list-style-type: none"> Where a company has timesheets, please provide same, details of when the timesheets are created, details of when reviews took place to identify the qualifying and non-qualifying

⁸⁴ Independent reports will not be carried out in all cases and are not a requirement to claim under section 766 – section 766D TCA 1997. Where the company has such a report it should be included here as it may assist Revenue in reviewing the project, e.g. Horizon 2020 Grant Report.

how the qualifying element of the project is identified.	<p>elements and who undertook the review</p> <ul style="list-style-type: none"> • A record retained for grant awarding bodies, please supply these records
d. Allocation between qualifying and non-qualifying please provide the basis for the allocation and the process and control procedures around monitoring same (while this may not be done on a contemporaneous basis it should be done in a timely basis e.g. month in arrears, quarter end review, it is imperative the allocation is completed prior to R&D claim on CT1 and that supporting documentation is available for review)	
19. Outsourcing	Include in Tab L
a. Any expenditure paid to 3 rd party contractors or service providers in the course of carrying on R&D activities (excluding utilities)	
b. Any expenditure paid to a university or 3 rd level institute in the course of carrying on R&D activities	
c. A brief outline the work carried out by the other parties under (a) or (b)	
d. Total amount paid and copies of contracts or list of tasks assigned to outsourcing partner and related Invoices	
e. Copies of any notifications issued to sub-contractors under section 766(1)(b)(viii)	
20. Details of any apportioned expenses (other than staff apportioned), and support on the method of apportionment chosen	Include in Tab M
21. Details of grants received or ones to be received in relation to the project. Type of grant e.g. Expenditure on R&D, employee grants, building grant etc. Provide copies of documentation from the awarding body.	Include in Tab N
22. Materials used in qualifying R&D may be of further commercial value once the activities cease, please value at the lower of cost, or net realisable value of any materials or other saleable product or by-product	Include in Tab O
23. For claims under section 766A or section	Include in Tab P

766D, details of amounts in respect of which the claim is made	
a) Provide details of the land cost, which does not qualify for relief under section 766A or section 766D	
b) Date treated as incurred <ul style="list-style-type: none"> • date actually incurred or, • date the building was first brought into use
