# 1. Introduction

## 1.1 Overview

This document describes the structures of the messages that the traders' automated declarations systems exchange with AIS. It provides the documentation of the XML structures of the messages, including the XML elements of the messages, their description and additional technical information. We also separately provide the XSDs of the messages, which can be used for building the source code for the programs that interoperate with AIS by producing and consuming messages.

## 1.2 Notations

Each message has a unique identifier, such as IM099, TS304, etc., which denotes the category of the message and the numeric identifier of the message in the category.

The document uses two tables to describe each message:

- The summary table outlines the structure of the message. It lists only the high level elements of the message, up to level three (3).
- The detailed description table, which includes all the XML elements of the message.

For each XML element the following information is included:

Column name	Description
LEVEL (L)	The level of the given element in the hierarchy of all the XML elements of the message. One level one, there is only one, the so called "root" element of the XML document. Its name is the same as the identifier of the message (e.g. IM099, TS304).
MESSAGE ENTITY	The description of the message entity. The indentation visually represents the level of the entity in the hierarchy. Where applicable the entity is prefixed with the UCC identifier of the entity.
XML TAG	The actual XML tag (element) for this entity.
WCO CODE	Where applicable, this is the WCO code of the entity.

<p>REPETITIONS</p>	<p>The repetitions (cardinality) of the element. The notation is explained in the examples below.</p> <table border="1" data-bbox="440 331 1407 710"> <thead> <tr> <th data-bbox="440 331 571 398">REP</th> <th data-bbox="577 331 1407 398">Description</th> </tr> </thead> <tbody> <tr> <td data-bbox="440 398 571 504">0..1</td> <td data-bbox="577 398 1407 504">Zero or one repetitions. 1..1	Exactly one repetition. This is a mandatory element that may exist up to one time.																						
0..99	This is an optional element that may be repeated up to 99 times.																						
<p>TYPE</p>	<p>The type of the element. The notation is explained in the examples below. Note that the type defined in this document is abstract. There can be more restrictions to the acceptable syntax of each element. These are described in details in the respective XSD file.</p> <table border="1" data-bbox="440 875 1407 1868"> <thead> <tr> <th data-bbox="440 875 571 943">REP</th> <th data-bbox="577 875 1407 943">Description</th> </tr> </thead> <tbody> <tr> <td data-bbox="440 943 571 1048"><b>Complex</b></td> <td data-bbox="577 943 1407 1048">This is a complex XML element.
