# 1. Introduction

## 1.1 Overview

This document describes the structures of the messages that the traders' automated declarations systems exchange with AIS. It provides the documentation of the XML structures of the messages, including the XML elements of the messages, their description and additional technical information. We also separately provide the XSDs of the messages, which can be used for building the source code for the programs that interoperate with AIS by producing and consuming messages.

## 1.2 Notations

Each message has a unique identifier, such as IM099, TS304, etc., which denotes the category of the message and the numeric identifier of the message in the category.

The document uses two tables to describe each message:

- The summary table outlines the structure of the message. It lists only the high level elements of the message, up to level three (3).
- The detailed description table, which includes all the XML elements of the message.

For each XML element the following information is included:

Column name	Description
LEVEL (L)	The level of the given element in the hierarchy of all the XML elements of the message. One level one, there is only one, the so called "root" element of the XML document. Its name is the same as the identifier of the message (e.g. IM099, TS304).
MESSAGE ENTITY	The description of the message entity. The indentation visually represents the level of the entity in the hierarchy. Where applicable the entity is prefixed with the UCC identifier of the entity.
XML TAG	The actual XML tag (element) for this entity.
WCO CODE	Where applicable, this is the WCO code of the entity.

<p>REPETITIONS</p>	<p>The repetitions (cardinality) of the element. The notation is explained in the examples below.</p> <table border="1" data-bbox="443 331 1402 707"> <thead> <tr> <th data-bbox="443 331 571 398">REP</th> <th data-bbox="579 331 1402 398">Description</th> </tr> </thead> <tbody> <tr> <td data-bbox="443 398 571 506">0..1</td> <td data-bbox="579 398 1402 506">Zero or one repetitions. ### Messages for H1 – H6 declarations and messages for H7 declarations

The messages for the H1 – H6 declarations and the H7 declarations are the same in terms of identifiers and names. However, the messages of the H7 declarations have different format and content, which are based on the EUCDM 6.0 r1 data model that was recently introduced by the Commission. The messages for the H1 – H6 declarations are based on the EUCDM 5.1 data model.

The import and the refunds messages for the H1 – H6 declarations are documented in the chapters 4 and 5 The import and the refunds messages for the H7 declarations are documented in the chapters 6 and 7.

### Messages IM413 (H1-H6), IM415 (H1-H6), TS313, TS315 and the respective declarations

The messages IM415 and IM413 (H1-H6) can be used for sending H1..H6 and I1 declarations and amendments for these declarations. The XML elements of the IM415 and the IM413 messages are the union set of all the XML element used in all the eight import declarations (H1..H6 and I1). Respectively, the messages TS315 and TS313 can be used for the G4 and the G4G3 declarations.
