1. Introduction

Automated Import System (AIS) is Revenue's electronic import system, is being upgraded to align with the latest Revised Annex B, which complies with the provisions of the Union Customs code (UCC). UCC stipulates that all communications between Trade and Customs must be electronic, and as such you will now also be able to upload supporting documents to Revenue via AIS.

Centralised Clearance for Import (CCI) allows authorised economic operators to declare goods in one Member State (Supervising Member State). These goods can be physically imported in a different Member State (Presenting Member State). The economic operator communicates only with the supervising customs office as single point of contact. The digitalisation of the Centralised Clearance for Import concept streamlines communication between the different Customs Offices in different Member States.

The Union Customs Code (UCC), along with EUCDM and the Revised Annex B defines how to complete a declaration and outlines the specifications required for IT systems. All messages are now mapped to the EUCDM version 6 with some minor deviations to allow for national requirements, these deviations are included here and in the referenced documents.

This guidance document is for the following purpose:

- ➢ New Data Element structure, and their format
- ➢ Detailed description of each Data Element
- ➢ A guide to the details you will require before submitting a declaration.

Consideration must be taken that there are numerous data elements to be input to complete a declaration. The format of the Import Declaration now consists of three levels of detail:

1(a)   Levels within Declarations

Level One *
  ➢ **Declaration Header Level (All Declaration Types) ***
   o The data elements of the declaration level contain information that applies to the entire declaration.

Level Two **
  ➢ **Goods Shipment Level (Declarations H1 to H7 I1 and I2) ***
   o The Goods Shipment level contains all information about goods that are subject to one standard declaration Goods Shipment level relates to the totality of goods which are subject to the same standard customs declaration. The information at this level is applicable for every Government Agency Goods Item

  ➢ **Master Consignment Level (Declarations G3, G4 and G5) ***
   o The data elements of the Master consignment level contain information that applies to a transport contract issued by a carrier and direct contracting party. This header information is applicable for every Master Consignment Item in case of declarations and notifications referred to in column D of EUCDM.

  ➢ **House Consignment Level (Declarations G3, G4 and G5) ***
   o The data elements of the House consignment level contain information that applies to the lowest transport contract issued by a freight forwarder, non-vessel or aircraft operating common carrier or agent or a postal operator. This header information is valid for every House Consignment Item in case of declarations and notifications referred to in column D in EUCDM.

Level Three***
  ➢ **Government Agency Goods Item Level (previously Goods Shipment Item Level) (Declarations H1 to H7 I1 and I2) ****
   o The Government Agency Goods Item level contains all detail information of one single Item in a Goods Shipment.

  ➢ **Master Consignment Goods Item Level (Declarations G3, G4 and G5) ****
   o The data elements of master consignment goods item level is a sub-level to the Master consignment level. The data elements of the Master consignment item level contain information about the different positions in the transport document referred to in the Master consignment. This Item information is applicable in case of declarations and notifications referred to columns G.

  ➢ **House Consignment Goods Item Level (Declarations G3, G4 and G5) ****
   o The House consignment goods item level is a sub-level to the House consignment level. The data elements of the House Consignment Goods Item Level contain information that originate from different positions in the transport document referred to in the current House consignment. This Item information is applicable in case of declarations and notifications referred to in column D in EUCDM.

*   See Data Element Structure Annex B
**   See Data Element Structure Annex B
*** See Data Element Structure Annex B

Where you are importing one item, some of this information will be entered at Declaration Header and Goods Shipment Level, where you are importing multiple items then information will need to be entered in Declaration Header, Goods Shipment and Government Agency Goods Item Level.

Data Element Numbers:

There are 3 levels to some Data Elements in the new format.

  ➢ **Data Group Number** which gives the details at header level. No declaration information goes in on this level.
  ➢ **Data Element Level 1** which gives the details the first level of information for example Address
  ➢ **Data Element Level 2** which gives the details of additional information to previous level, for example Address details street name and number etc.

Please note that there is a code list document that details all the codes that are available within each code list which indicates the data that can be input at the data element levels.

1(b)   CCI within Declarations

Under the UCC Centralised Clearance for Import, the economic operator lodges a customs declaration at the supervising customs office (SCI) for goods presented at another Member State presentation customs office (PCI).

The SCI validates the common data and national data and sends the declaration data to the PCI for validation of national data requirements. In order for the declaration to pass this validation, the national codes of both SCI and PCI must be included. To distinguish which D.E.'s should be validated by the SCI or PCI, the CC qualifier indicator is used.   The CC qualifier contains the country code of the respective member state.   For example, where an Irish national code is declared such as 1A01 in DE 12 04 002 000 in the CC qualifier indicator line then IE would be declared, and this indicates that IE would be the country to validate.

Throughout this document where you see a * red asterisk this denotes where the country code for CC qualifier is required.

10. Meaning of the Declaration Status

Status	Description
REGISTERED	This status is set when a pre-lodged declaration is received and has passed the logical validation process. An MRN has been assigned at this stage. The goods have not been presented yet.
ACCEPTED	This status is set when the declaration has passed the logical validation process. In case of pre-lodged declarations this status can only be set when the goods have been presented. This is a transient status and may never appear in the user interface.
AWAITING_SUPPLEMENTARY	A Simplified declaration has been received and accepted. A Supplementary declaration must now be lodged within a specific time limit.
UNDER_CONTROL	The declaration information has caused the Risk Analysis system to mark the declaration for either Documentary or Physical Controls.
UNDER_REVIEW	The declaration is under review by Revenue customs.
CERTEX_REVIEW	The declaration is under review by Revenue customs due to CERTEX reference certificate.
SUSPENDED_RELEASE	The declaration is pending certificate verification from an external agency (CERTEX).
INSUFFICIENT_FUNDS	The declaration has incurred a Customs Debt or Security Deposit amount payable, but the Revenue's trader account has insufficient funds to cover the debt amount.
RELEASED	The declaration processing is complete and, depending on the requested procedure code, the goods can now be released for free circulation or deemed to be under the requested Special Procedure.
NOT_RELEASED	This status is set in the following cases: 1. Preceding controls have failed. 2. The incurred customs debt was not paid in time. 3. The declarant has requested an invalidation of the declaration and it has been accepted

11.   Excise Entries in Import

The declaration of excisable goods in AIS is still dependant on the relevant and accurate data to be input. Measurement unit codes reflect standard TARIC defined codes and the '1U' codes are no longer relevant.

In addition to this, the Excise Reference Number (ERN) has been replaced by a TARIC 3 format compliant code – please see below table for the relevant correlation.

Below are examples of how different excisable products may be declared, based on a sample CN Code showing the Data Elements and relevant codes. Please note that a Commodity Code may have more than one Excise code option available. To check an Excise code please contact the eCustoms Helpdesk.

Cigarettes

CN Code 6/14:	2402209000
National additional code 6/17:	X203
Supplementary Units 6/2:	As per TARIC, number of thousand
Measure unit, Additional information 2/3:	
Measurement unit:	RSP Retail Selling Price of the whole consignment
Quantity:	The value of the RSP in Euro for the whole consignment

For example, a consignment of 1000 cigarettes with a retail selling price of €750 is input as follows:
- 6/2 = 1
- 2/3 = RSP 750

Mineral Oil Tax and Carbon

CN Code 6/14:	3811190090
National additional code 6/17:	X103 and Y103
Measurement unit, Additional Information 2/3:	
Measurement unit:	KLT – 1000 litres
Quantity:	Number of litres expressed in KLT
Measurement unit:	VCT Volume for Carbon tax KLT
Quantity:	Number of litres expressed in KLT for Carbon

For example, 500 litres is expressed as 0.5 KLT

Beer

CN Code 6/14:	2203001000
National additional code 6/17:	X309 (beer exceeding 2.8%)
